1.0 Overview of the Large Pelagics Survey

The National Marine Fisheries Service (NMFS) is responsible for monitoring and managing U.S. marine fisheries resources. Large pelagic species (e.g., tunas, billfish, swordfish, and sharks) which are caught in offshore oceanic waters are of particular interest to NMFS as these species support socially and economically important recreational and commercial fisheries. NMFS closely monitors directed effort and catch rates for these highly migratory species, and adjusts management measures as needed to maintain stocks and the fisheries that depend on them.

Since 1992, the National Marine Fisheries Service has administered the Large Pelagics Survey (LPS) to collect information about the recreational fishery directed at large pelagic species (e.g., tunas, billfishes, swordfish, sharks, wahoo, dolphinfish, and amberjack) in the offshore waters from Maine through Virginia.

Angler participation in the LPS is mandatory and is a condition of obtaining a National Marine Fisheries Service Highly Migratory Species (HMS) permit.

The authority to collect LPS data comes from the Atlantic Tunas Convention Act and the Magnuson-Stevens Fishery Conservation and Management Act. The collection of catch and effort information on large pelagics also fulfills U.S. obligations to the International Commission for the Conservation of Atlantic Tunas (ICCAT).

Because large pelagic species are only sought on a relatively small proportion of the total marine recreational angler fishing trips made in the Northeast Region, the fishing effort directed at such species, and the resulting angler catches are generally not estimated very precisely by the Agency's Marine Recreational Fisheries Statistics Survey (MRFSS). Therefore, the LPS was designed as a specialized survey that would focus specifically on the recreational fishery directed at large pelagic species. This specialization has allowed higher levels of sampling needed to provide more precise estimates of pelagic fishing effort and catches of large pelagic species.

The LPS includes two independent, yet complementary, types of surveys which provide the effort and average catch per trip estimates needed to estimate total catch by species. The Large Pelagics Intercept Survey (LPIS) is a dockside survey of fishing access sites, primarily designed to collect catch data from private and charterboat captains who have just completed fishing trips directed at large pelagic species. LPIS data are used to estimate the average recreational catch per large pelagic boat trip by species. The Large Pelagics Telephone Survey (LPTS) collects data used to estimate the total number of boat trips on which anglers fished with rod and reel or handline for large pelagic species.

2.0 Overview of LPIS procedures

- Interviewers must conduct their assignment on the scheduled date at the assigned cluster.
- The only reason for not completing a scheduled assignment is if weather conditions do not allow for offshore game fishing and no boats are out that might be targeting a large pelagic species. This type of cancelled assignment is referred to as "weathered-out."
- If there is a small craft advisory (or greater, such as gale, storm, or hurricane warnings) on the assigned date, Interviewers should check the fishing activity at the assigned site(s) to confirm that no vessels are out fishing.
- "Weathered out" assignments must be rescheduled with a Field Supervisor according to LPIS protocol.
- Interviewers are responsible for determining the best time of the day to conduct their assignment and should be present at the assigned site(s) at the time of day when boats that fish for large pelagic fishes are most likely to return from fishing.
- The starting time on the specified date for each assignment shall be determined based on the understanding that an assignment must last at least two hours and may last no longer than eight hours.
- Interviewers should move from site to site to maximize sampling of returning boats at all access points within the defined cluster. Every site must be visited at least once!
- Interviewers must "check-in" and request to "sign-in" with a Site Representative (e.g. Dockmaster, Site Owner, Site Operator, or the other employee at the fishing access site) at each site in the cluster, if a Site Representative is present.
- Interviewers must canvass the site(s) to determine eligibility of Vessel Representatives.
- An eligible Vessel Representative is the captain, owner, or designated mate of a boat that just returned from an offshore rod and reel or handline fishing trip during which large fish such as tunas, billfish, sharks, swordfish, dolphin, wahoo, amberjack, or other large pelagic fish were targeted.
- All questions must be asked, all verifiable information should be discussed with the respondent, and all data should be appropriately recorded.
- All information shall be treated as confidential records.
- Paperwork must be submitted by fax within 24 hours and meet data quality standards.

3.0 General instructions

The questions to be asked during the Large Pelagic Intercept Survey interview are written out in full for a purpose. Methodological studies have shown that even slight changes in wording -- for example, **should** versus **could**, drastically influence item response. The Interviewer should always read each item on the questionnaire exactly as it is stated (unless it is an item that is on the HMS Permit List, in which case the Interviewer must **verify** the information with the Vessel Representative. Information on the HMS Permit List that must be verified includes the vessel name, NMFS HMS Permit number, Coast Guard Documentation number, State Registration number, principal port state, and name of the HMS permit holder.

If the Vessel Representative asks for the Interviewer's opinion about an item, the Interviewer should provide a definition for the item in question, rather than supply the actual response.

4.0 Pre-assignment procedures

Each Interviewer should make sure that he/she knows his/her interviewing schedule. QuanTech Field Supervisors will schedule Interviewers for assignments on a monthly basis. Assignments will be drawn for a cluster. Some clusters include only one site; other clusters may have multiple sites. Stay informed about the sites and clusters in your area.

The cluster list may change on a monthly basis.

Before accepting each assignment, each Interviewer should know the location of the assigned interviewing cluster. Adequate directions to get to the assigned site(s) shall be given to Interviewers by their Field Supervisor. If there is any confusion about where to interview, the Interviewer should contact his/her Field Supervisor.

Interviewers should contact their Field Supervisors to obtain their assignments. Interviewers should record the following information for each scheduled assignment:

- Date
- Control Number
- County Code
- Cluster
- Site Codes for all sites within the cluster
- Site Names for all sites within the cluster

Do not try to memorize your schedule of assignments.

Keep your list of accepted assignment information in a safe place.

Verify assignment information while reviewing your forms prior to transmittal.

QuanTech headquarters and Field Supervisors must be notified as soon as possible (and no

later than 24 hours) after an assignment is "weathered out".

Assignments that are "weathered out" will be rescheduled according to LPIS protocol for the next available day of the same day type (weekday or weekend/holiday). However, rescheduling "weathered out" assignments may only be done in coordination with the Field Supervisor. Interviewers should reschedule "weathered-out" assignments with the Field Supervisor in order to verify that another assignment has not already been scheduled for the same day and location(s). Once the Field Supervisor reschedules the "weathered-out" assignment with the Interviewer, the Field Supervisor will notify QuanTech Headquarters.

In addition, QuanTech headquarters and Field Supervisors should be contacted immediately if an Interviewer determines that he/she cannot do an assignment due to unforeseen circumstances or emergencies. If possible, another Interviewer will be asked to complete the assignment on the date for which it was originally drawn. If the assignment was rescheduled (previously weathered out), and "weathered out" again, every attempt should be made to reschedule the assignment in keeping with LPIS protocol.

Each Interviewer should make certain that he/she has all of the required materials and equipment for conducting interviews, including:

- Pen(s);
- Name Tag;
- Current HMS Permit List;
- Procedures Manual;
- Metal Tape Measure;
- Cloth or Plastic Tape Measure;
- Fish Identification Field Guide;
- Copies of the LPIS "To Whom" Letter from NMFS;
- Other Informational Materials/Brochures; and
- Plenty of Questionnaires/Coding Forms.

All Interviewers must have the required materials listed above in their physical possession when on site. Never leave required materials in the car! Interviewers should dress casually but neatly. Shorts are acceptable, but bathing suits are not. T-shirts are acceptable. Closed-toed shoes should be worn while interviewing. Alcohol or illegal drug use or intoxication on assignment is strictly prohibited, and grounds for termination. Fishing while on-assignment is prohibited. Failure to abide by these rules will result in a loss of future assignments for that Interviewer.

If interviewing is to be conducted where there is a Site Representative, such as an owner, manager, supervisor, dockmaster, or other person who works at the site, it is a requirement to "check-in" and speak with that person upon arrival at the site, explain the nature of the survey, its objectives, and how you will be performing your work. If the Site Representative wants more information than is immediately available, he/she should contact either NMFS or QuanTech Headquarters. Contact information is provided on the LPIS "To Whom" letter from NMFS.

4.1 “Weathering out” assignments

The only reason for not completing a scheduled assignment is if weather conditions do not allow for offshore game fishing and no boats are out that might be targeting a large pelagic species. This type of cancelled assignment is referred to as "weathered-out." Interviewers should obtain offshore weather reports to determine if an assignment should be “weathered out.”

Consider the following to determine if or when to conduct your assignment and where to begin:

- Weather reports
 - Small Craft Warning, Gale Storm Warning or Hurricane Nearby?
If yes, and there are no boats out that might be targeting a large pelagic species then "weather out" the assignment and reschedule with the Field Supervisor.
 - Offshore weather is highly variable, a sudden change in sea conditions may force some vessels to return early. Get weather reports from the National Weather Service, your local news "Offshore Report", or the Weather Channel.
 - Check the Internet links at <http://www.quantech.com/weather.htm>
- Call the site(s)
 - Determine if a Site Representative (if there is one) will provide you with reliable information concerning the number of boats that went offshore and the time that they are expected back.
- Contact your Field Supervisor
 - When accepting your assignments, obtain recommendations on when to go, and which site in a cluster to visit first. Keep in contact with your Field Supervisor concerning the weather, and communicate any intentions to weather out in a timely manner.

4.2 When to begin assignments

It is important to be on-site by the appropriate time for each assignment. The appropriate time to arrive on site is before eligible vessels are returning from offshore trips. You may need a few minutes to “site-in” prior to interviewing. By assessing the potential to obtain interviews at each site within a cluster and going to those locations at the appropriate time to increase your productivity you will obtain more interviews.

Sources of information include but are not limited to:

- Master Site Register – The MSR has a field for “best time to interview” based on

historical visits to each site. This is a good starting point but should not be relied upon solely as this can change from one year to the next.

- Call the site(s) - Determine if a person that works at the site(s), such as the Dockmaster, will provide reliable information concerning the number of boats that went out and the time that they are expected back. Phone numbers for contact persons are provided in the MSR. While calling ahead can help the interviewer determine when to visit a site it should not be used to determine if a site should be visited. Interviewers should physically visit all sites within a cluster to determine firsthand if there is fishing activity or not. Under no circumstances should an assignment be canceled based solely on information obtained by calling the sites within a cluster.
- Ask the Field Supervisor - When accepting assignments interviewers may consult with their supervisor regarding the best sampling times and which site in a cluster to visit first.
- Newspaper articles, weekly magazine fishing reports, and large pelagic fishing related web sites may be useful for monitoring activity levels, upcoming tournaments, and seasonal openings and closures of marinas and/or charter boat operations.
- State natural resource agency personnel, NMFS regional personnel, and NMFS port agents may also be good sources of information on the patterns of offshore pelagic fishing at specific sites.

5.0 Consider the following scenario:

Offshore weather conditions are conducive to fishing, you expect that there will be some vessels fishing for large pelagics, and there are three sites in the assigned cluster...

5.1 Call the sites within the cluster in the morning to ask if any vessels went out. Find out how many vessels went out from each site and when the vessels are expected to return to the site.

In this situation, the site operators have proven to be reliable sources of information in the past. They inform you that at site #1 there are 4 eligible boats out, at site #2 there are 2 boats out, and at site #3 there are 5 boats out.

The vessels that departed that morning from site #1 are expected back between 4pm and 5pm, the vessels from site #2 are expected back at 5p.m., and those from site #3 are expected back between 5p.m. and 6p.m.

5.2 Consider the proximity of the sites within the cluster.

Site #1 and site #2 are next door to each other, separated by a dock. It is possible to observe the returning vessel activity at both locations from one vantage point. Site #3 is nearby, within a 5

minute drive, however, you cannot see the boats as they return unless you make the trip down the road.

5.3 Begin at the site where the vessels are expected back sooner.

You arrive at site #1 at 3:45p.m. and check-in and sign-in at site #1 at the Dockmaster's office. The Dockmaster at site #1 informs you that one of the vessels is already in and the captain and crew of that vessel already left the site. You then go to the office at site #2 and check-in with the Site Owner. Both vessels expected to return to site #2 are not back yet. You decide to stick around and wait for the other three vessels at site #1 because they usually return around 4:30pm. Also, you keep an eye on the neighboring site (site #2) because the vessels might return there around the same time. You manage to obtain interviews from one of the three vessels returning to site #1, but around 4:45pm, while you were waiting for the remaining two vessels to return to site #1 you notice both of the vessels at the site next door (site #2) returning to the dock. After giving the vessels a chance to tie up, you obtain two interviews from respondents at the second site, but now you see one of the remaining two vessels returning to site #1. It is now 5:15pm.

5.4 Decide how to move within the cluster of sites to maximize the number of interviews that you obtain.

There is now one interview and the potential for another interview that you can obtain at site #1 while there is the potential to obtain 5 interviews at site #3. Now you are presented with a somewhat difficult decision...you could stay and get two more interviews from the late-returning vessels at site #1 and possibly miss a few of the respondents at site #3 or travel to site #3 in hopes that you might obtain interviews from all five vessels returning to site #3.

You decide to obtain the interview from the vessel that just returned to site #1, but rather than wait around for the last vessel to return to site #1, you decide to go to site #3. At 5:35pm, after a short drive, you arrive at site #3. All five of the vessels have not yet returned to site #3. Rather than driving back to site #1 to wait for the remaining vessel, you stay at site #3 and obtain 5 more interviews. By the time these interviews at site #3 are complete, it is 6:45pm. Finally, you visit site #1 on your way back home and obtain one last interview before ending your assignment.

6.0 On-Site procedures

Interviewers should remain on-assignment to obtain as many intercepts as possible. However, assignments shall not exceed 8 hours in duration. To qualify as a completed assignment, the minimum amount of time (2 hours) must be spent within the cluster. You will not be paid for the assignment if you do not stay within the cluster for at least 2 hours.

NEVER depart from your assigned cluster to help another nearby Interviewer. This is necessary in case a boat arrives at your assigned cluster. Interviewers will occasionally receive surprise quality control (QC) visits from their Field Supervisor, or possibly a NMFS official, so all Interviewers must be on-site for this reason, as well.

Interviewers should position themselves so that they can observe as much activity as possible at the site(s). The goal is to intercept as many eligible respondents as possible. The best locations to be positioned will vary from site to site. Your Field Supervisor is a good person to talk to about this, as he/she will probably have visited the site as an Interviewer in the past.

Positioning yourself at a cleaning station may cause you to miss other eligible respondents who did not catch fish and bias the catch estimates.

Canvass the entire site to maximize the number of eligible interviews that can be obtained.

At some sites it is possible and advisable to build rapport with the people present prior to conducting any interviews. Those who have had the opportunity to meet the Interviewer and discuss the survey tend to be more cooperative when asked for an interview. A key factor in gaining the respondent's initial cooperation and confidence in the study lies in assuring him/her of the non-enforcement nature of the survey. When explicitly given the true purpose of the survey very early in the introduction, respondents tend to be much more willing to cooperate with the survey.

The canvassing process should be very informal and as unobtrusive as possible. The conversation might begin with "Good Afternoon" or "How's it going?". While canvassing, the Interviewer should introduce themselves and be respectful. The Interviewer should be polite at all times, regardless of any complaints that he or she may receive.

6.1 Hostile sites and refusals

Sites where Interviewers are impeded or prohibited from interviewing are referred to as "hostile" sites. When an Interviewer encounters a hostile site as part of their assigned cluster they should take the following action:

- Avoid confrontation with the site manager or any other persons at the site and leave the "hostile" site immediately;
- Record that the site was "hostile" on their Site Description Form (SDF) by recording relevant information, such as:

 "[Site Representative] will not allow interviewing at [Site Name], because [Reason]."
- Notify the area Field Supervisor as soon as possible.

QuanTech headquarters and the Field Supervisor must be notified after leaving a "hostile" location, in keeping with the deadlines for reporting assignment status/faxing paperwork (within 24 hours).

If asked to leave a site, it may be possible to visit other sites within an assigned cluster. As long

as the assignment was for a cluster of sites, and not just one site, go to the other sites within the cluster and obtain interviews with eligible fishery participants.

If the assignment was for a single site, and you are asked to leave, you will receive your base pay. A letter or email to QuanTech explaining what happened is required to receive payment.

At other sites LPIS Interviewers may be allowed to interview but only at certain locations within the site as determined by the site manager (e.g., interviewing allowed at slips but not at the fuel dock). Interviewers should note this on the SDF but can continue to interview at the site in the locations allowed. The extent of the impediment should be provided, such as:

“No interviewing at fuel dock, [number] missed eligible vessels due to restriction. Vessels were returning to private access sites outside of the cluster.”

Interviewers may encounter captains who refuse to participate in the survey because they are in a rush, don't agree with NMFS policies or a variety of other reasons. Captains who don't agree with NMFS policies should be encouraged to contact NMFS directly to air their complaints (using the address or phone number on the “To Whom” letter).

It is not appropriate to defend or attack NMFS or its policies. Under no circumstances should an Interviewer identify him/herself as an employee of the National Marine Fisheries Service. Interviewers are independent contractors for QuanTech.

If the captain or owner does not want to participate, and does not want to designate a mate to participate, but remains cordial (soft refusal), then try once to convert the soft refusal by politely explaining that the survey collects catch and effort statistics used to manage the fishery...If they do not participate then they will not be represented in the data collection. Their participation will strengthen the accuracy and precision of the survey, and therefore lead to appropriate management decisions.

Alternatively, respondents need to be reassured that the information they provide is confidential under NOAA Administrative order 216-100. Always remind them that you are not there to issue citations or fines, and that all you want to do is collect accurate fishery data.

Interviewers should never be “pushy”. Interviewers should only tell Vessel Representatives that the survey is mandatory if they ask directly. Offer a copy of the “To Whom” letter, which states that participation in the survey is required. If a respondent refuses the survey midway through an interview, the Interviewer may inform the respondent that the Interview is almost finished and thank them for their patience to try to convert the mid-interview soft refusal.

If the respondent absolutely refuses to participate, will not designate a mate to participate, or becomes belligerent or irate (hard refusal), the Interviewer should simply say “Thank you” and walk away. No attempts should be made to convert a hard refusal. If the respondent follows the Interviewer, or acts out-of-line, the Interviewer should leave the premises immediately. In either

case, whether the respondent gives a soft refusal or a hard refusal, the Interviewer must never threaten enforcement action.

Besides tallying as either an initial or mid-interview refusal, Interviewers should record as much of the following information as possible: name of the vessel, HMS permit number, state registration number, Coast Guard documentation number, name of person refusing, any LPS fish seen, the reason for refusal, and any other relevant details in the comments section.

For Example:

“The captain of the “Tuna Time” refused today. HMS permit # 12345678, State Registration MS1234AB, I saw them unload 1 school BFT. He says he will not participate until someone from NMFS tells him he must.”

To reduce the number of “hostile” sites and refusals, the National Marine Fisheries Service will send a package of Large Pelagics Survey information to “hostile” site owners or fishery participants recorded on your Site Description Form(s).

6.2 Confidentiality of data

In addition to collecting high quality data, following procedures, and maintaining a courteous and professional attitude while conducting your assignments, one of the most important aspects of interviewing for the LPIS includes your assurance to respondents that the data they provide will remain confidential.

The confidential nature of the data applies to all information collected during an interview, even what species were caught, where they were caught, and what method and gear was used. Under no circumstance should you ever disclose information given to you by a respondent to anyone who is not authorized to have access to such confidential fisheries data.

This policy applies to all types of communication, written, verbal, or otherwise, including Internet message board postings.

When you get a request for data and/or survey design information simply provide contact information for NOAA and QuanTech. This information is listed on the LPIS “To Whom” Letter.

6.3 Overlap with the Marine Recreational Fisheries Statistics Survey

Another firm, Macro International, is contracted to collect data for the NMFS Marine Recreational Fisheries Statistics Survey (MRFSS). In the event that a MRFSS Interviewer arrives at a site and finds an LPS Interviewer on-site, or an LPS Interviewer arrives at a site and finds a MRFSS Interviewer on-site, the MRFSS Interviewer takes precedence unless:

1) the site is an alternate site for the MRFSS Interviewer (i.e., not originally assigned), in which case the MRFSS Interviewer should relocate to another alternate site;

OR

2) the site is the only one in the LPIS cluster, in which case the MRFSS Interviewer should relocate to an alternate site.

Both Interviewers are expected to cooperate in determining who should relocate to another site.

All incidents of such overlap between LPIS and MRFSS Interviewers (or other Interviewers from other fisheries-related surveys), and how they were resolved, must be reported to QuanTech headquarters within 24 hours.

6.4 Coding

Data from dockside forms will be captured using optical character recognition (OCR) technology. It is important to follow coding procedure discussed in this section.

- **NEATNESS COUNTS.**
- **STAY INSIDE THE LINES.**
- **IF YOUR FORMS ARE ILLEGIBLE OR FAXED IMPROPERLY WE WILL CALL YOU AND ASK YOU TO FIX THE ERRORS AND/OR FAX THEM AGAIN.**

PLEASE remember to write legibly in Block Capitals (Upper Case) on the dockside forms. Take your time while recording data, in other words, be accurate and precise. Optical recognition software will interpret your entries, so be as neat as possible. Remember, providing quality data is crucial to the success of the study!

As a rule, items on the questionnaire that are not applicable to a certain respondent (i.e., legally skipped questions) should be left blank, unless otherwise stated.

- **Items on the questionnaires which the respondent does not know the answers to must be coded with 9's ending with the number 8 unless otherwise stated.**
- **Items on the questionnaires that are refused must be coded with all 9's unless otherwise stated.**

Examples of this type of coding can be found in the following examples of Questions 24 through 26:

Q24. Where were you fishing for large pelagic species?

N	O	R	T	H			O	F		L	U	M	P	S
---	---	---	---	---	--	--	---	---	--	---	---	---	---	---

9	9	9	9
---	---	---	---

< Lat.

9	9	9	9
---	---	---	---

 < Long.

The respondent said they spent most of their time fishing north of "The Lumps". The respondent knew the latitude and longitude coordinates but refused to provide them. The location is not in the fishing areas list in Appendix C, so the correct codes are 9999 and 9999.*

If the respondent had said they did not know the coordinates then latitude and longitude and the location is not in the fishing areas list in Appendix C, the correct codes would be 9998 and 9998.*

***See the item-by-item description for Q24 later in this manual for more detailed instructions concerning use of the fishing areas list in Appendix C.**

Q25. How many miles were you offshore—that is, how many miles was it to the nearest land?

9	9	8
---	---	---

Number of Miles

The respondent said they did not know how far offshore they were, thus the 998 code. Had they refused to tell you how far offshore they were, the code would be 999.

Q26. How many feet deep was the water (depth to bottom)?

9	9	9	8
---	---	---	---

<Water Depth in Feet

The respondent said they did not know how deep the water was, thus the 9998 code. Had they refused the code would be 9999.

6.5 Leading zeros and left or right justification

If a numeric value does not require the use of all of the boxes provided, right justify the entry and add leading zeros. For instance, if a fish measurement is 887 millimeters, its length should be coded as follows:

0	8	8	7
---	---	---	---

In another example, the respondent said the water depth was 300 feet...code 0300.

26. How many feet deep was the water (depth to bottom)?

0	3	0	0
---	---	---	---

<Water Depth in Feet

If an alphabetic value does not require use of all of the boxes provided, left justify the entry as follows:

H	A	N	K			M	A	S	O	N			
---	---	---	---	--	--	---	---	---	---	---	--	--	--

6.6 “Write-in” areas

Also, you must use the “write-in” areas. Using Question 16 as an example:

16. For what large pelagic species were you primarily fishing today?
(Probe for at least one species. If Bluefin Tuna, probe for size category. Choose appropriate code from Coding List.)

4 7 1 1 1 1st Target YFT

1 0 5 0 2nd Target Dolphin

Note for question 16 above, “YFT” and “Mahi”, are recorded on the “Write-in” line, and the appropriate species code is recorded.

Note that for question 22, the respondent was trolling, chumming, and fly fishing.

22. For your (INSERT GEAR) fishing, which method was used?
(READ LIST; FILL IN ALL THAT APPLY)

1 Trolling

1 Chumming

1 Chumking

1 Other (SPECIFY BELOW)

FLY FISHING

Letters of the alphabet should always be written in **BLOCK CAPITAL LETTERS**.

Other coding examples can be found in Appendix A.

Do not put a line through zeros or sevens; Do not close the top of fours; Make sure zeros do not look like sixes, and vice versa; the OCR will not read these characters correctly.

To ensure that the optical character recognition will read your handwriting, numbers should be written as close as possible to the following format: 1 2 3 4 5 6 7 8 9 0

6.7 The HMS Permit List

In order to verify information in the field with respondents, QuanTech has compiled a Permit List of vessels. This HMS Permit List is a database containing boat-identifying information, such as the owner's name, the NMFS Highly Migratory Species permit number, and the Coast Guard documentation number or State registration number, first sorted by boat name and then permit holder last name in alphabetical order. An HMS Permit List will be created for each state or state group. There may be up to three versions of the HMS Permit List. For example, there may be one list for June, another for July/August, and another for September/October. Interviewers must make sure they have the current Permit List with them on assignment. There are privacy issues surrounding the HMS Permit List so the information should never be shown to anyone else. The information on this HMS Permit List is merely used to assist in the verification of vessel identifying information.

When you check-in at a site and find out what vessels are expected back, if there is time, look up the vessels in the HMS Permit List before they return. Confirm the information with the respondent when conducting an interview. If there is no time to look up the vessels beforehand, ask the questions on the form as they are written. If a respondent does not want to get their permit information, offer to check to see if the boat is on the HMS Permit List. If so, you simply need to verify the listed information with the respondent, instead of formally asking him/her the questions. However, if the vessel is not on the HMS Permit List, then the Interviewer should ask them to get the permit information directly from the respondent. Inform the respondent that they would have to just get the information once, be sure to record the information in your copy of the HMS Permit List and tell the respondent that you will inform the Field Supervisor and other Interviewers in your area, in case the respondent is encountered on future assignments.

Keep in mind that, though an intercepted boat may be listed on the HMS Permit List, it is essential that you verify all of the HMS Permit List information with the respondent for the following reasons:

- though the boat may have been interviewed before, it is possible that the respondent was not interviewed (e.g., if a boat has more than one owner); if this occurs, be sure to get the new respondent's information, so that it can be added to the HMS Permit List;
- there could be a mistake on the HMS Permit List;
- there may be more vessels with the same boat name.

6.8 Intercept survey forms

Blank LPIS forms, including the Screening Introduction, Assignment Summary Form, Site Description Form, and first and second pages of the LPIS Questionnaire, are included in Appendix B and are provided to serve as examples only.

6.8.1 Screening Introduction (The Screener)

When an interviewer encounters an operator of a returning boat, he/she should use the screening introduction to introduce himself/herself, state the purpose of the survey, and ask questions which will determine whether the respondent is eligible for an interview. The interviewer should give his/her name and state that the study is sponsored by NMFS. If the intercepted boat operator is willing to cooperate, the interviewer should then ask the series of questions used to determine eligibility. To be eligible for the survey, the potential respondent must be the captain or owner of a boat that has just completed an offshore fishing trip that targeted large pelagic species. For the purposes of the screening introduction, large pelagics include all of the species listed under the "LPS" column in Appendix F.1. Boat operators returning from fishing trips that used hand-gear (rod and reel or handline) and specifically targeted, but did not catch any of the specified large pelagic species would be considered eligible. Therefore, data are desired for all hand-gear fishing trips that targeted at least one large pelagic fish species regardless of what was caught during that trip.

If an eligible operator of a charter or private boat chooses to designate a crew member or passenger to respond to the survey as a "proxy", then that individual shall be considered eligible for an interview. In such cases, it will be necessary for the interviewer to record that the respondent was a designated proxy for the captain or owner of the boat.

Screener Item 1: On this vessel, are you the captain, owner, or mate or passenger (proxy designated by the captain to participate in this survey)?

- If the respondent says "yes", go to Screener Item 2.
- If the respondent is not the captain or owner or designated proxy, try to locate the eligible respondent. Otherwise, terminate the interview, and tally as NOT CAPTAIN OWNER OR MATE on the Site Description Form.

Screener Item 2: Did your boat just return from an offshore rod and reel or handline fishing trip in which you targeted large pelagic fish such as tunas, billfish, sharks, swordfish, dolphinfish, wahoo, amberjack, or other large pelagic fish?

- If the respondent says "yes", go to the intercept questionnaire.
- If the respondent says he/she was fishing for some other species the interviewer should probe to determine if they were also fishing for any other large pelagic species; if the respondent was not targeting a large pelagic species then the interview should be

terminated and the respondent tallied on the Site Description Form (SDF) as DID NOT TARGET LARGE PELAGIC SPECIES.

- For example, if someone says they incidentally caught a sandbar shark while targeting summer flounder, they are **not** eligible for the survey.

If a vessel appears to have targeted large pelagic fish but the respondent does not want to participate in the survey, the interview should be terminated and the respondent tallied on the Site Description Form as a REFUSAL. Information about the refusal should also be recorded in the comments section of the SDF as described in Section 6.1.

6.8.2 Intercept Interview: Item by item instructions

Once again, PLEASE remember to write legibly in Block Capitals (Upper Case). Take your time while recording data; in other words, be accurate and precise. Optical recognition software will interpret your entries, so be as neat as possible. Remember, providing quality data is crucial to the success of the study!

Items 1 through 8 are not questions to be asked of the respondent. They are primarily identifying information.

- Item 1 INTERVIEWER CODE. Each Interviewer must be given a unique four-digit identification number. This number should be used on all submitted forms.
- Item 2 DATE OF INTERVIEW. The Interviewer should record the Month/Day of the intercept. Two digits for both the month and the day should be used.
- Item 3 TIME OF INTERVIEW. Using military time, record the time that the interview was completed. Military time runs on a 24-hour clock starting at 0001 hours (one minute past midnight) and ending at 2400 hours (midnight).
- Item 4 STATE CODE. Enter the two-digit FIPS numeric code from Appendix E for the state of intercept.
- Item 5 CONTROL NUMBER. **NEVER LEAVE THE CONTROL NUMBER BLANK. BE SURE THAT YOU USE THE CORRECT CONTROL NUMBER GIVEN TO YOU BY YOUR FIELD SUPERVISOR FOR EACH ASSIGNMENT.** Each assignment is given a four-digit identifying number. The first digit of the control number indicates if it is a weekend or weekday assignment. If the first digit is a 1, it is scheduled for a Saturday, Sunday, or holiday (e.g., July 4th, Independence Day). If the first digit is a 2, it is scheduled for Monday, Tuesday, Wednesday, Thursday or Friday. The second digit indicates the mode of the assignment. A 1 indicates an assignment during which private boat intercepts are preferred; while a 2 indicates that charter boat intercepts are preferred (interviews can be conducted in either mode on any

assignment). The 3rd and 4th digits are used as counters for the number of assignments given out in a given state and month.

Item 6 **DOCUMENT NUMBER.** Throughout an assignment, the Interviewer should consecutively number forms completed for the assignment. **BOTH PAGES** of the first interview should be numbered 01; **BOTH PAGES** of the second interview should be numbered 02, etc. All forms sent in should be numbered, regardless of interview status.

Item 7a **SITE NUMBER.** Enter the four-digit FIPS number of the site where the interview is being conducted. The site number should be listed on the Interviewer's assignment schedule as one of the sites within the assigned cluster, as well as in the site register.

Item 7b **CLUSTER.** Interviewer should enter the two digit number for the cluster of sites assigned for that day. The cluster number should be listed on the Interviewer's assignment schedule.

Item 8 **SITE TYPE.** Enter the type of site at which the interview took place.
If interview took place at a marina, code 1.
If interview took place on a private dock, code 2.
If interview took place at a public ramp, code 3.
If interview took place at some other type of site, code 4.

Item 9 **WHAT IS THE NAME OF YOUR BOAT?**
If the name of the boat is evident (e.g., if it is written on the boat itself), then the Interviewer must still verify the information with the respondent, and fill in the name on the coding form. If the boat name is not apparent, the Interviewer should ask the respondent "What is the name of your boat?" and fill in the information. If the boat has no name, the Interviewer should leave the long row of boxes at Question 9 blank and fill in the "no name" oval underneath.

Sometimes the name displayed on the boat is not the same as the current vessel name or the name on the HMS Permit List (e.g., the vessel has been renamed, but the old name has not been removed from the boat; the old name has not been removed from the HMS Permit List; the current name has not been painted on the boat; the name was spelled incorrectly on the boat or entered incorrectly when the owner/operator applied for the vessel's HMS permit, etc.). This means that the Interviewer must take great care when recording the name of the boat on the questionnaire.

Interviewers must also be made aware that some names displayed on vessels are not actually the vessel names. That is, they might just be the brand names or emblems of the manufacturer, such as Mako, Whaler, Trophy, or Sea Fox. However, sometimes vessels are named by their owners on the HMS Permit List

according to their manufacturer's name and length, such as Spencer 57 or Grady-White 28.

If it is visible, the Interviewer should say the name of the boat out loud while checking to see if the vessel name is in the HMS Permit List. If the name displayed on the boat is verified as the vessel name, and the vessel name is in HMS permit directory, then Interviewers should be sure they are recording information for the correct vessel by verifying the owner's name, or by matching some other data element, such as the State registration number, if it is displayed on the side of the boat.

Most larger boats do not have State Registration numbers displayed, but trailered boats usually do. It's also a good idea for the Interviewer to spell the name out loud while coding, to confirm its spelling with the respondent, just in case the HMS Permit List is incorrect. If the actual spelling of the vessel does not match the spelling on the HMS Permit List, the Interviewer must make note of the discrepancy and contact QuanTech after completing the assignment.

It is extremely important that Interviewers record the vessel name EXACTLY as it appears on the vessel, or EXACTLY as the captain specifies. If the vessel is on the HMS permit list, they should record the name EXACTLY as it appears on the list. Even slight changes in the spelling of a vessel name should be avoided.

Item 10a IS YOUR BOAT PRIMARILY A...

Item 10a records how the boat is primarily used and identifies partyboats and headboats. Fill in the appropriate oval. If party/headboat, Interviewers should still complete the interview even though the questionnaire instructs the Interviewer to terminate the interview. The instruction is only provided as a reminder that these vessels should not be knowingly approached for the LPIS.

Item 10b WAS THE TRIP TODAY A CHARTER OR PRIVATE TRIP?

Item 10b pertains to the type of trip taken that day, private or charter. Fill in the appropriate oval.

The next set of questions (Items 11a through 13) are asked in order to further identify the boat.

If the vessel has a NMFS HMS permit, the NMFS HMS permit category determines the mode of the interview.

Interviewers are given an HMS Permit List of NMFS HMS permitted vessels in their state (or multi-state area). The HMS Permit List contains boat-identifying information, such as the permit holder's name, the NMFS Highly Migratory Species or Atlantic Tunas permit number and category, and the Coast Guard documentation number or State registration number, sorted by boat name and then by permit holder name, in alphabetical order. There are privacy issues surrounding these HMS Permit Lists so the information on these lists should never be shown to

unauthorized persons. Permit holder contact information (e.g., address and phone number) does not appear on this list. The information on the HMS Permit List is merely used to assist in the verification of a boat's HMS permit number (and permit category).

If vessels are still out fishing when the interviewer arrives on-site he/she may have time to look up the vessels in the HMS Permit List before the vessels return. This way the interviewer needs only to confirm the information with the respondent when conducting the interview. If there is no time to look up the vessels beforehand, interviewers should ask the questions on the form as they are written. If a respondent does not want to get their permit information, the interviewer should offer to check to see if the boat is on the ID list. If so, the interviewer should verify the listed information with the respondent, instead of formally asking him/her the questions. However, if the vessel is not on the HMS Permit List, then the interviewer should ask the questions to get the permit information directly from the respondent. Respondents should be informed that they would have to just get the information once. Interviewers should record the information in their copy of the HMS Permit List. Interviewers should inform their Field Supervisors of any changes or additions to the ID list, and Field Supervisors should make sure these changes get passed on to other LPIS interviewers in the area and to the home office staff.

Although an intercepted boat may be listed on the HMS Permit List, it is essential that interviewers verify all HMS Permit List information with the respondent for the following reasons:

- Though the boat may have been interviewed before, it is possible that the respondent was not interviewed (e.g., if a boat has more than one owner); if this occurs, be sure to get the new respondent's information, so that it can be added to the HMS Permit List;
- There could be a mistake on the HMS Permit List;
- There may be more than one vessel with the same boat name.

If interviewers are unable to obtain the HMS permit number they should try to obtain the Coast Guard documentation number or the state registration information. It is very important that interviewers get at least one of these identification numbers.

NMFS HMS Permit numbers typically begin with 1 and are eight digits long.

Item 11a DOES THE BOAT HAVE A NMFS HMS PERMIT, AND IF SO, WHAT CATEGORY IS IT? Explain that HMS stands for Highly Migratory Species, if necessary. Read the possible permit categories to the respondent. Explain the difference between the permits (if necessary). Fill in oval 1 if the vessel has a General category HMS permit. Fill in oval 2 if the vessel has an Angling category permit. Fill in oval 3 if the vessel has a Charter/Headboat category permit. If the vessel is not in the HMS Permit List and the respondent claims that the vessel does not have an HMS permit, then fill in oval 7 for "No HMS permit". If the vessel is not in the HMS Permit List, and the respondent does not know the

category, then fill in oval 8 for “Don’t know”. If the vessel is not in the HMS Permit List and the respondent refuses to answer the question, fill in the oval 9 for “Refused”.

If the respondent does not provide you with the permit category and it cannot be verified with the respondent on the HMS Permit List, fill in oval 7, 8 or 9, as appropriate, and go to Item 12.

Item 11b **WHAT IS YOUR BOAT’S NMFS HMS PERMIT NUMBER?** Enter the vessel's HMS permit number. HMS permit numbers must be either:

- 1) Verified with the respondent by matching the HMS permit number with the vessel name and Vessel Representative name on the HMS Permit List; or
- 2) Obtained directly from the respondent (if the vessel is not on the HMS permit list and the respondent shows you the vessel’s HMS permit); or
- 3) Corrected by the Respondent (if the respondent shows you the vessel’s HMS permit and the number is different from the number in the HMS Permit List).

If you are able to verify the HMS permit number from the HMS permit list with the respondent then fill in oval 1 “Verified with Respondent”. If you obtain the HMS permit number directly from the respondent then fill in oval 2 “Obtained from Respondent”. If the HMS permit number is incorrect on the HMS Permit List, then fill in oval 3 “Corrected by Respondent”. If the respondent does not know or refuses to give his/her number, fill in oval 8 or 9, as appropriate, and go to Item 12.

Item 12 **CAN YOU TELL ME/VERIFY YOUR BOAT’S COAST GUARD DOCUMENTATION NUMBER?** If the intercepted vessel's Coast Guard documentation number is contained on the HMS Permit List, you need only verify the information with the respondent and fill in the information on the coding form. If the vessel is not on the HMS Permit List, ask the respondent to provide the vessel’s Coast Guard documentation number. If given, enter the Coast Guard documentation number in the boxes provided, and go to Item 14. If the respondent claims that the vessel does not have an Coast Guard documentation number and the Coast Guard documentation number cannot be verified from the HMS Permit List, fill in oval 2 “Vessel has no Coast Guard Documentation Number”. If the respondent does not know the vessel’s Coast Guard Documentation number, and the number cannot be verified with from the HMS Permit List, fill in oval 8 “Don’t Know”. If the respondent refuses to provide the vessel’s Coast Guard Documentation number, and the number cannot be verified with from the HMS Permit List, fill in oval 9 “Refused”.

Item 13 **CAN YOU TELL ME/VERIFY YOUR BOAT’S STATE REGISTRATION**

NUMBER? Enter the intercepted vessel's State registration number. If the number is written on the side of the boat, or if the State registration number is contained on the HMS Permit List, you need only verify the information with the respondent and fill in the information on the coding form (including the state abbreviation). If the respondent claims that the vessel does not have a State registration number and the State registration number cannot be verified from the HMS Permit List, fill in oval 2 "Vessel has no State registration number". If the respondent does not know the vessel's State registration number, and the number cannot be verified with from the HMS Permit List, and the State Registration number is not on the side of the boat, fill in oval 8 "Don't Know". If the respondent refuses to provide the vessel's State registration number, and the number cannot be verified with from the HMS Permit List, and the State Registration number is not on the side of the boat, fill in oval 9 "Refused".

Item 14 PRINCIPAL PORT STATE CODE. The first set of boxes is for the State abbreviation, the second set of boxes is for corresponding FIPS code (see Item 4 for codes). Record the State abbreviation and the FIPS state code for which the respondent **indicates is the vessel's principal port state**. If the vessel has an HMS permit and is the vessel is on the HMS Permit List, the Principal Port State should be verified with the HMS Permit List.

Item 15 RETURN TIME. The purpose of this question is to determine when the respondent returned from his/her trip. If you actually see the respondent return to the site, you need only verify the return time with him/her. Otherwise you should ask "At about what time did your boat return to this site?" Returning boats that had docked prior to the assignment start time should be included in the LPIS as long as the trip ended that day. Please interview eligible boats regardless of their arrival time on that day. **Use military time to record the return time.**

Item 16 TARGET LARGE PELAGIC SPECIES. Fill in the appropriate 4 digit code for the 1st and 2nd target large pelagic species in the boxes and write the name on the blank to the right of the boxes. Both targets will only be LPS codes.

The 1st target is the primary target and the 2nd target is the secondary target.

On the "write-in line", it is OK to use abbreviations such as "YFT" for yellowfin tuna or "school BFT" for school size bluefin tuna. It is extremely important that you probe to find the primary target to the species level. If either the 1st or 2nd target is BFT, it is important to probe for size class. If the respondent states that they were targeting bluefin tuna, be sure to determine which size class they were targeting! Probe for the size class by providing the options (young school, school, large school, small medium, large medium and giant). Interviewers should be familiar with the length ranges for the BFT size classes and discuss them with the respondent (see below).

Size Class Categories of Atlantic Bluefin Tuna

SIZE CLASS	CURVED FORK LENGTH (CFL)
Young school	<27"
School	27" - <47"
Large School	47" - <59"
Small Medium	59" - <73"
Large Medium	73" - <81"
Giant	81" or >

If the respondent will not specify one of these size classes, but says they were targeting BFT greater than 27" and less than 59" CFL, code 4672.

This code, 4672, is only valid for Q16.

If the respondent will not specify which size class or the combined school and large school size range of bluefin tuna they are targeting, code 4670 for any BFT.

If the respondent absolutely will not say which species they were targeting but will only specify species groups, such as "SHARKS" then code 3591 for "ANY SHARK". The code for "ANY TUNA" is 4656. The code for "ANY LPS" is 7777.

If they say they were targeting no particular large pelagic species, code as 7777 for "ANY LPS". If they targeted a species for which there is no established LPS species code then record as 5250 for "OTHER" and write the name in the space available. See Appendix F for complete list of LPS species codes. If the respondent indicates targeting a species for which there is no code in Appendix F the interviewer should make a note of this on the form and the Contractor should contact NMFS for the appropriate code.

Item 17a TOURNAMENT PARTICIPATION. Check the appropriate box to indicate if the intercepted vessel was participating in a tournament on the intercepted trip.

Item 17b TOURNAMENT NAME. If the respondent answered yes at question 17a, ask for the name of the tournament at question 17b, and fill in the name on the coding form (one letter per box). Next, enter the four-character tournament code (see Appendix K) below the tournament name. If the angler was not fishing in a tournament, leave Item 17b blank.

- Item 18 HOOK TYPE. Indicate the type of hooks used on the intercepted trip. Be sure to fill in all ovals that apply. Circle hooks are defined in 50 CFR §635.2 as “a fishing hook originally designed and manufactured so that the point is turned perpendicularly back to the shank to form a generally circular, or oval, shape.”
- Item 19 NUMBER OF LINES. Interviewers should enter the number of lines the boat had in the water. If given a range of lines, record the maximum number of lines in the water at any given time.
- Items 20 HOURS FISHED. Indicate the number of hours spent actually fishing with the primary gear for large pelagic species. Do not include the time spent traveling to and from the fishing area.
- Item 21 BAIT USED. Indicate if live, dead, and/or artificial bait was used on the intercepted trip with the primary fishing gear. Be sure to fill in all ovals that apply.
- Item 22 METHOD(S) USED. Indicate whether anglers were trolling, chumming or chunking or other- *Fill in all ovals that apply and SPECIFY IF OTHER.*
- Item 23 NUMBER OF ANGLERS. Indicate the total number of anglers who were actively involved in large pelagic fishing on the intercepted trip. Do not include persons on the vessel who did not fish.
- Item 24 LOCATION. Indicate the name of the main fishing area that was used to fish for large pelagic species. Even if the fishing area is listed in the Fishing Areas List (Appendix C), ask the respondent if they know the latitude and longitude. If the respondent can provide the latitude and longitude, then enter the coordinates provided by the respondent. If the respondent gives multiple locations, clarify by asking were he/she fished for LPS most of the time.

If the respondent says they do not know the coordinates and the coordinates are **not** listed in Appendix C, then latitude and longitude should be coded 9998 and 9998. If the respondent refuses to provide the coordinates and the coordinates are **not** listed in Appendix C, then latitude and longitude should be coded 9999 and 9999. However, if coordinates are listed for the fishing area in Appendix C **for your interviewing State** and the respondent did not know or refused to provide them, then the latitude and longitude listed in Appendix C should be entered.

There are fishing locations with similar names in different States. Do not use coordinates for a fishing area from Appendix C unless it is listed in your State.

If the respondent provides a fishing location name and does not know the latitude and longitude but instead provides LORAN (*LO*ng *RA*nge

*Navigation) coordinates, then record the location name and write the LORAN numbers after the name. Then, if the fishing location provided by the respondent is in Appendix C, fill in the latitude and longitude from Appendix C. However, if the location is not in Appendix C, then record 9998 for latitude and 9998 for longitude.

Item 25 MILES OFFSHORE. Indicate the maximum number of miles that the intercepted vessel strayed from land on the intercepted trip. Be sure to get the mileage to the nearest point of land, as opposed to the mileage to the site of intercept.

Item 26 WATER DEPTH. Indicate the depth (in feet) at the intercepted vessel's fishing location. If the respondent cannot provide an exact depth, try to obtain a depth range, and use the midpoint. If the response is given in fathoms, remember that

- **6 FEET = 1 FATHOM**

and adjust the response accordingly, or just write the number of fathoms to the side of the boxes on the coding form, and later convert the measurement to feet. If a range of depths are provided, record the average depth.

Item 27 WATER TEMPERATURE. Indicate the surface water temperature in degrees Fahrenheit. If the respondent cannot provide an exact temperature, try to obtain a temperature range, and use the midpoint.

Item 28 NAME AND PHONE. A percentage of all interviews are validated. To do so, we must have a name and phone number where the respondent can be reached for an extremely short interview (about 2 minutes). This number will not be used for the Large Pelagic Telephone Survey, and the respondent does not necessarily need to give his/her full name, or a home phone number. Clearly record the respondent's name and phone number (including area code) in the appropriate boxes on the coding form. It is imperative that interviewers ask this question of all respondents and the information recorded comes only from the respondent. Interviewers should never back-fill this information from the Permit List or other sources of information.

PROXY? If the respondent is a proxy (designated by the captain or owner to participate in the survey) fill in the oval for "YES". Otherwise, if the respondent is the captain or owner, then fill in the oval for "NO".

If the respondent will not provide a name or telephone number (we need both) then fill in the oval indicating *< RESPONDENT WOULD NOT PROVIDE A NAME OR TELEPHONE NUMBER*

Item 29 CAUGHT FISH. Indicate if any fish were caught or released during the fishing trip. If fish were caught, fill in the oval for "Yes" and go to the second page of the

intercept form, question 30. If no fish were caught or released, or if they refuse to answer, fill in the appropriate oval, end the interview, and thank the respondent for their time. Be especially careful to fill in the correct response at Item 29.

If Q.29 = “Yes”, then continue the interview on the second page.

If Q.29 = “No” or the respondent refuses to answer the question, then the interview is complete. Thus, only the first page of the intercept should be faxed to QuanTech.

Note: Items 4, 5 and 6 are repeated at the top of the second page. This will prevent confusion when numerous forms are faxed in to the home office. Always complete these items!

Item 30 FISH COUNTS. If fish were caught, indicate, by species:

- the fish species name;
-
- the fish species code;
-
- the number of fish that were kept;

- the number of fish that were kept that were observed and identified by the Interviewer;

- the number of fish released alive;

- the number of fish released dead;

- the number of fish that were kept that have been or will be sold;

- the number of fish that were kept that have been weighed-in or will be weighed-in at the tournament weigh station (if participating in a tournament on the intercepted trip, q.17a=Yes).

Note: The count for “number of fish to sell” and “number of fish to weigh-in” should be a subset of those fish that were kept. Be sure that the respondent includes all kept fish when they are asked the first part of Item 30 “number kept.” When asked "How many of those ___ that you kept did you sell or do you plan to sell?" and "How many of those ___ that you kept did you weigh-in or do you plan to weigh-in at the tournament weigh station?", the response should be a subset of those fish that were kept.

Interviewers should ask respondents if they can see all fish that were kept. If for some reason kept fish are not available to be counted and identified, the interviewer should make a note of this in the “notes” area on Item 30. If the interviewer is absolutely certain that the respondent is making a mistake in count or species identification, they should record the correct information on

the form, as opposed to the incorrect information supplied by the respondent. The Guide to Sharks, Tunas & Billfishes of the U.S. Atlantic & Gulf of Mexico and Guide to the Tunas of the Western Atlantic will help with species identifications. Peterson's Field Guide to Atlantic Coast Fishes of North America is also a good source of information. When in doubt about the species identity of any unobserved fish, the interviewer should appropriately identify the fish at a higher taxonomic level, such as genus or family. However, Interviewers are expected to be able to identify all observed fish to the species level.

Interviewers must always ask to see fish that were kept, so they can be correctly identified. While most LPIS respondents are experienced anglers who know how to correctly identify fish, they do not always use the accepted common name. “Bonito”, for example, might refer to skipjack in the Northeast, and little tunny in the Southeast. Also, some respondents may have simply misidentified the fish. For instance, small yellowfin tuna and bluefin tuna look quite similar. Sometimes, it is necessary to count gill rakers on the first gill arch (bluefin tuna have 34-43 gill rakers, yellowfin tuna have 26-35) or to look at the fish’s liver when it is being cleaned to see if its ventral surface is striated or not. The bottom of the bluefin tuna’s liver has striations while the yellowfin tuna’s liver does not. King mackerel can be misidentified as wahoo, and vice versa. (Wahoo have no gill rakers and have a pointed, beak-like snout, while King Mackerel have 8-9 short gill rakers on the lower first gill arch). Sharks are also difficult for the average recreational angler to identify correctly. For example, sandbar sharks and dusky sharks are easily confused because they are both “ridge-back” sharks. Differentiation between the two species is possible by studying the position of the pectoral fins in relation to the dorsal fin. Even billfish can be misidentified. Within the last few years, an undersized blue marlin was landed at the White Marlin Open in Ocean City, MD because the angler thought it was a large white marlin!

Interviewers must be capable of identifying the fish to the species level themselves.

Another reason why it is important to observe the fish (besides identification) is to count them. While it’s unlikely that the respondents will not know how many of a particular kind of tuna they caught, they often forget how many dolphin (or mahi mahi, for example) were kept, especially if many were caught.

Fill out the corresponding line and coding boxes for each species caught. Always remember to probe for bycatch. If the respondent cannot remember or refuses to indicate how many he/she kept or released of a certain species, record "don't know" or "refused" (as appropriate) in the margin. Try to probe the angler for catch information (species and numbers), particularly for incidental catch and released fish that are not available for inspection. Anglers will sometimes use a local name for a species that does not match the accepted common name provided in Appendix F. Interviewers should refer to the Local Names list provided in Appendix F. Interviewers must probe to ensure they are recording the correct species since some local names are used to refer to more than one species. The local names list will be updated as needed to reflect new names encountered in the field.

Fill in zero’s where appropriate for disposition boxes. For example, if the respondent says they only “released alive” 05 little tunny, be sure to fill in 00 in the appropriate boxes for “number

kept”, “number identified by Interviewer”, “released dead”, “number to sell”, and “number to weigh-in”. Do not leave the any boxes blank.

30. What species were caught? SEE LIST BELOW; FOR EACH SPECIES, ASK: How many of those did you keep? INTERVIEWER: OF THOSE THAT WERE KEPT, HOW MANY DID YOU OBSERVE AND IDENTIFY? How many of those were released alive? How many of those were released dead? How many of those that were kept were sold or will be sold? IF Q.17a=YES, How many of those that were kept were weighed-in or will be weighed-in at the tournament weigh station?

Fish Species (including size category if BFT)	Species Code	Number Kept	Number Identified by Interviewer	Number Released Alive	Number Released Dead	Number to Sell or Already Sold	Number to Weigh-in or Weighed-in
1. false alb.	4681	00	00	05	00	00	00

If an interviewer encounters a species not listed on the form, they should write in the species name and code of the species at the "Fish Species" line, along with the counts by disposition. All fish species caught should be included on the form even if they are not large pelagic fish. If there are more than ten fish, use as many second pages of the interview form as necessary to include all fish caught. Please refer to the species code list on the second page of the intercept form. If the species code is not listed on the second page of the intercept form, check Appendix F of this manual for the correct species code. Record the species code after recording the name of the fish. If the respondent caught a species for which there is no code in Appendix F, the interviewer should make a note of this on the form.

In the example below, on this interview, 1 young school bluefin tuna was released alive, one school bluefin tuna was kept. and 2 yellowfin tuna were kept. The fish that were kept were observed and identified by the interviewer. The Interviewer recorded the number of fish that were kept, observed and identified by the Interviewer, released alive, released dead, kept to sell or already sold, and weighed-in or will be weighed-in at the tournament weigh station.

30. What species were caught? SEE LIST BELOW; FOR EACH SPECIES, ASK: How many of those did you keep? INTERVIEWER: OF THOSE THAT WERE KEPT, HOW MANY DID YOU OBSERVE AND IDENTIFY? How many of those were released alive? How many of those were released dead? How many of those that were kept were sold or will be sold? IF Q.17a=YES, How many of those that were kept were weighed-in or will be weighed-in at the tournament weigh station?

Fish Species (including size category if BFT)	Species Code	Number Kept	Number Identified by Interviewer	Number Released Alive	Number Released Dead	Number to Sell or Already Sold	Number to Weigh-in or Weighed-in
1. YSBFT	4673	00	00	01	00	00	00
2. SBFT	4677	01	01	00	00	00	00
3. YFT	4711	02	02	00	00	00	00

NOTE that Atlantic Mackerel, Spiny Dogfish, Striped Bass, Bluefish, and Cod are not considered large pelagic species. These species are only listed on this table as a convenience, because they represent some of the most frequently caught non-large pelagic species on trips that primarily targeted large pelagic species in previous survey years.

NOTE Unidentified hammerhead shark, species code 4950, should only be used if the respondent

does not know what species of hammerhead was caught and the fish is unavailable for you to identify.

Item 31 FISH MEASUREMENTS. Once the interviewer has counted and identified all observed catch, he/she should ask for permission to measure at least a representative sample of the fish to obtain lengths. If the angler did catch and keep any fish, ask "May I measure the fish?" If the respondent says "yes", fill in oval 1. If the respondent refuses to let the interviewer measure the fish, or has no fish available to look at, then fill in oval 2 and indicate why the fish were not measured in the notes section provided in Item 30. Fish that have been filleted are not considered available for measuring. If more than 10 fish are available for measuring, fill in Items 4 through 6 at the top of the second half of another form and use that form to fill in the remaining fish lengths. Use as many forms as necessary.

For the purposes of this survey, bluefin tuna size classifications should be determined by its curved fork length as indicated in Item 30 on the survey form.

SPECIES
CODE.

Use the four digit species codes provided in Item 30 for LPS species; if the species code is not listed, record the actual species name and look up the species code in the list provided in Appendix F.

LENGTH. DO NOT MEASURE ANY NON-LARGE PELAGIC FISH SPECIES (SUCH AS BLUEFISH, STRIPED BASS, BLACK SEA BASS, TILEFISH, ETC.)

DO MEASURE THE LENGTH OF ALL LARGE PELAGIC SPECIES IN MILLIMETERS.

For the following tuna species, obtain both straight fork length and curved fork length:

- Bluefin
- Bigeye
- Albacore
- Yellowfin
- Skipjack

Fish lengths should be recorded to the nearest millimeter (do not measure in inches and then convert)! Do not measure in centimeters. Most of the measuring tapes that will be used for the LPIS will be marked in both metric and English measurements. To determine millimeters, multiply the centimeter reading by 10 and add the number of the smallest markings past the centimeter marking. For example, a fish that measures to the smallest line past 73 centimeters would be 731 millimeters. Since four coding boxes are provided for the length, the length should be coded as 0731. **Remember, there are 1000 millimeters in one**

meter...

Interviewers should be careful not to introduce digit bias into their measurements -- do not round off—for example, 0731 to 0730!

Interviewers are provided two measuring tapes for a reason. Metal tape measures shall only be used to measure straight fork length. Cloth or plastic tape measures shall only be used to measure curved fork length.

- 1) **STRAIGHT FORK LENGTH (SFL).**
Measure using a metal measuring tape and record only the straight fork length of the fish in millimeters. Make sure the metal measure tape is straight when measuring SFL. Straight fork length must be taken in a straight line, as close as possible to the fish without tracing the contour of the body from the most anterior tip of the longest jaw (mouth closed) or end of snout, whichever is terminal, to the posterior tip of the tail at its center line. The resulting length is therefore a straight fork length.

- 2) **CURVED FORK LENGTH (CFL).**
Measure using a cloth or plastic measuring tape and record only the curved fork length of the fish in millimeters. CFL measurement is required for Bluefin tuna, Bigeye Tuna, Albacore, Yellowfin Tuna, and Skipjack in addition to SFL. Curved fork length must be taken in a line, tracing the contour of the body from the tip of the upper jaw to the fork of the tail, which abuts the dorsal insertion of the pectoral fin and the dorsal side of the caudal keel. The measuring tape must pass over (and touch) the pectoral fin and the caudal keel.

Interviewers must also express the importance of obtaining length measurements to respondents. Interviewers must obtain as many length measurements as possible to provide this important data to fishery managers. These length measurements are important because they are converted to weights for catch quota monitoring by NMFS. They are also used in stock assessments, and for estimating age for cohort analysis.

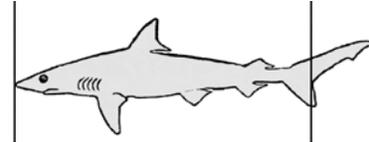

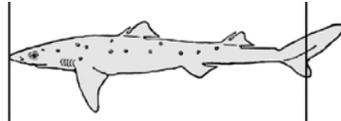

Interviewers should record only those measurements that they took themselves. Occasionally, especially if the fish is very large, you may need to ask for assistance to measure the fish. If this is the case, you must be very deliberate in your instructions to the helper (who might be a fish cleaner or angler) to make sure the measurement is taken to LPIS specifications. For billfish, upper-jaw-to-fork length and lower-jaw-to-fork length measurements must be obtained. For all other fish, SFL and CFL measurements will be taken from the front tip of the jaw to the fork in the tail.

Proper SFL and CFL measurements must be recorded. Interviewers must know

the difference between straight fork length and curved fork length, and when it is appropriate to measure both. CFL and SFL measurements on BFT and Bigeye, Albacore, Yellowfin tuna, and Skipjack (sometimes referred to as the BAYS tunas) are required.

Correct procedures for measuring lengths of various types of fish are shown in the diagrams below.

Sharks are measured from the tip of the snout to the center of the fork of the tail.

All other species (except billfish and swordfish) are measured from the most anterior tip of the longest jaw (mouth closed) or end of snout, whichever is terminal, to the posterior tip of the tail at its center line. This procedure is the same whether the tail forks in (e.g., tunas, mackerels) or protrudes out. The resulting length is therefore a fork length.

GENDER

For all sharks and dolphinfish (mahi mahi), Interviewers must record the gender of each fish (1=male, 2=female, 8=undetermined).

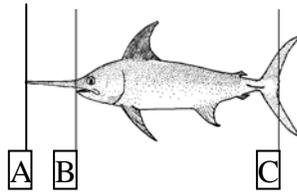

PREP

Record the preparation of the fish (0=whole, 2=gutted, 6=pectoral length). Only fish that are whole or gutted should be measured (prep= 0 or 2). The only exception to this rule is for Giant Category and Large Medium Category bluefin tuna and only if the full body length cannot be obtained. If these fish are brought in headed then the interviewer may obtain a pectoral length measurement and place a 6 in the PREP code box indicating a pectoral length measurement. Fish that have had their tail cut off should not be measured.

BILLFISH & SWORDFISH

Special procedures for measuring billfish and swordfish must be followed. **Take straight measurements using a metal measuring tape in millimeters and record.** Boxes for billfish and swordfish measurements are located at the bottom of the second page of the intercept questionnaire.

Straight measurements for billfishes and swordfish are obtained from the tip of the upper bill to the center of the fork of the tail (On the form, UPPER BILL LENGTH, from A to C below) and from the tip of the lower jaw to the center of the fork of the tail (On the form, LOWER JAW LENGTH, from B to C below).

NOTE: The interviewer should record the **straight** UPPER BILL LENGTH to the fork only if the bill is intact (complete, not broken off). Do not record the **straight** UPPER BILL LENGTH if the bill is broken off, rather, record only the **straight** LOWER JAW LENGTH.

See Appendix G for more information on the procedures for measuring various types of fish.

SUB-SAMPLING

All fish should be measured if possible. However, due to time constraints it may not always be possible to obtain length information for all available fish. Interviewers need to budget their time and maximize the number of interviews obtained with eligible vessels. If there are so many fish that individual measurements cannot be obtained, then a representative sample of fish should be measured. For example, if there were 38 dolphinfish and there is only time to record 10 measurements, then ten fish could be sub-sampled.

To randomly sub-sample the fish, interviewers should blindly determine which fish to inspect rather than purposely try to pick the fish that look "average." Only ten fish should be recorded at Item 31 for each page. To record additional fish measurements, include additional "second pages". Fill in Items 4 through 6 at the top of another copy of the second page of the interview form, leave Q.30 blank, and use Q.31 to record measurements for the remaining fish. In the notes section, indicate "page 3" and the vessel name.

Reminders:

On each second page, Items 4 through 6 must be filled in at the top of the page to match the first page of the interview. Start document numbers (interview numbers) at 01 for each assignment.

Obtain both the straight fork length (SFL) and the curved fork length (CFL) for bluefin tuna, bigeye tuna, albacore, yellowfin tuna, and skipjack that are available to measure. Do not measure CFL for other species.

Remember that if you encounter a bluefin tuna, its size classification should be determined by its curved fork length (CFL). If an angler tells you that he/she caught a large school bluefin at Item 30, for instance, and you find that the CFL actually measures 1508 millimeters, you should record it as a small medium bluefin at Item 30. You should also make sure that you record it as a small medium in Item 31.

Do not obtain pectoral fin measurements (from base of pectoral fin to fork in tail) for fish that have been beheaded unless it is a giant or large medium bluefin tuna.

Fish that have been filleted or had their tail cut off should not be measured.

7.0 Site Description Form (SDF)

The Site Description Form (SDF) is used to summarize the results of the completed assignment with information from each site (within a cluster). Paperwork for each assignment that you submit must include at least one Site Description Form. If there are three sites or less in the cluster, then there should be only one SDF submitted. There is only enough space on each SDF to record information for three sites visited. An example of a blank Site Description Form may be found in Appendix B.

INTERVIEWER CODE: Each Interviewer is given a unique four-digit identification number. This number, found on the back of the Agreement, should be used on all submitted forms.

INTERVIEW DATE: The Interviewer should record the Month/Day of the intercept. Two digits for both the month and the day should be used.

STATE CODE: Enter the two-digit numeric code for the state of intercept. The state code list may be found in Appendix E.

CLUSTER ID: Enter the two digit number for the cluster of sites that you are assigned for that day. The cluster number should be listed in your assignment schedule. Possible values will range from 01, 02, 03...to 10.

CONTROL NUMBER: Each assignment is given a four-digit identifying number. The first digit of the control number indicates if it is a weekend or weekday assignment. If the first digit is a 1, it is scheduled for a Saturday, Sunday, or holiday (e.g., July 4th, Independence Day). If the first digit is a 2, it is scheduled for Monday, Tuesday, Wednesday, Thursday or Friday. The second digit indicates the mode of the

assignment. A 1 indicates an assignment during which private boat intercepts are preferred, while a 2 indicates that charter boat intercepts are desired. NEVER LEAVE THE CONTROL NUMBER BLANK. BE SURE THAT YOU HAVE THE CORRECT CONTROL NUMBER GIVEN TO YOU BY YOUR FIELD SUPERVISOR.

**SITE NAME &
SITE #1 CODE:**

Enter the site name and four-digit number of the first site visited. The site number should be listed on the interviewer's assignment schedule as one of the sites within the assigned cluster, as well as in the site register.

COUNTY CODE #1:

Enter the three-digit county number assigned to the site visited where interviews are being conducted. The county code should be listed on the interviewer's assignment schedule, as well as in the site register.

**SITE REPRESENTATIVE
NAME and TELEPHONE
NUMBER:**

If a Site Representative is present at the site, record their name and the telephone number for the site.

**SITE REPRESENTATIVE
INITIALS:**

After "checking-in" with a Site Representative, ask the Site Representative to initial your SDF on the "write-in" line for SITE REPRESENTATIVE INITIALS in the section for the site they represent.

TIME OF INITIALS:

If the Site Representative initials your form ask them to record the "sign-in" time on the "write-in" line next to TIME OF INITIALS.

**ESTIMATE # OF
ELIGIBLE VESSELS
PER DAY FOR
CURRENT MONTH:**

Estimate the number of eligible vessels per day for the current month on a good weather day that will return to the site. This estimate will likely vary by mode (private vs. charter boats) and the day type (weekend vs. weekday). Under "PR" enter the numbers estimated for both weekend and weekday for Private boat trips. Under "CH" enter the numbers estimated for both weekend and weekday for charter boat trips.

STATUS: All intercepted persons should be classified under the appropriate status and tallied on the Site Description Form for each site. Status definitions are as follows:

COMPLETED INTERVIEWS:

Enter the number of completed verifiable interviews with eligible respondents. The interview is considered a completed verifiable interview with an eligible respondent if responses are provided for all questions and there is:

- A valid respondent name and valid telephone number
OR
- A valid boat name and either a valid HMS permit number or valid Coast Guard documentation number, preferably all three.

Use Question 11a to determine mode: If permit type is charter/headboat then record as CH for charter boat interview; if permit type is General or Angling then record as PR for private boat interview. Permit type should be verified and recorded using the HMS Permit List, if the vessel is listed.

If the respondent does not have an HMS permit, does not know what type, or refused the question, and the vessel is not listed in the Permit List, refer to Question 10a (Boat Primarily Operated As) to determine mode of interview (1 = PR, 2 = CH).

If the respondent does not know or refuses to answer 10a, then refer to 10b (trip today) to determine mode of interview (1 = CH, 2 = PR). If the respondent does not know or refuses to answer 10b, note in the comments section of the SDF.

MID-INTERVIEW

REFUSALS:

If the interviewer initiates the interview questionnaire with a respondent but they terminate the interview after questioning has begun, the interviewer should thank the respondent for their time and tally. A refusal to question 29 also constitutes a mid-interview refusal.

INITIAL

REFUSALS:

If a seemingly eligible respondent refuses to be interviewed at all, it is considered an "initial refusal" and should be tallied. Ask the person his or her name and record it along with the boat name (and any other identifying information, such as state registration #) in the comments section of the SDF (see 2.2.3 Hostile Sites and Refusals).

**LANGUAGE
BARRIER:**

Fill in the number of interviews that could not be obtained due to language incompatibility. If interviewer initiates an interview with a respondent, but they are unable to continue due to communication (language) problems, tally. Interviews may be conducted with a captain's translator, if one is present. If this does occur make a note of this on the SDF.

**ESTIMATE OF MISSED
ELIGIBLE BOATS:**

Interviewers should determine the number of eligible boats missed at each site because they were in the midst of another interview. Interviewers should record the number of boats appearing to be eligible that they were unable to intercept at each site because they were interviewing another vessel's respondent. "Eligible" vessels are those that have returned from a saltwater fishing trip using handline or rod and reel gear that either targeted or incidentally caught a large pelagic species. Interviewers should only record as "missed eligible" vessels returning to the site the interviewer is currently at. Interviewers should not record as "missed eligible" vessels that were missed at other sites in the cluster because the interviewer was at another site or traveling between sites.

Most often interviewers will have to make the determination of eligibility based on visual cues rather than actually asking the captain. Visual cues which may indicate whether a vessel is eligible for the LPIS include:

- large pelagic fish on board or being off-loaded;
- vessels flying large pelagic species flags; or
- vessels with fishing gear (rods, reels, fighting chairs) typically used for large pelagic species.

Interviewers may also use the following to determine if a missed vessel was eligible for interviewing:

- their own local knowledge of particular vessels and/or captains;
- information obtained from the office, site manager, or others at the site; or
- information about charter boat schedules.

Below are some Frequently Asked Questions (FAQs) that interviewers might have related to the definition of "missed eligible boat."

"Missed eligible boat" FAQs

Q. I see a vessel returning from an offshore trip to a different site in my

assigned cluster (i.e., not the site I am currently at). Do I tally the vessel as a “missed eligible.”?

A. No. Only vessels returning to the site you are currently at should be tallied.

Q. I see an eligible vessel temporarily docked to refuel at a site I am currently interviewing at. I miss getting the interview because the vessel leaves while I am interviewing another vessel. I can’t tell if this vessel stayed within the cluster after it left the fuel dock. Do I tally this on my SDF as a missed eligible?

A. Yes, this would be considered a “missed eligible” for the fuel dock site because the vessel stopped at the site while you were there. The only reason you could not interview this vessel was because you were busy interviewing another vessel. Note: If you catch up with this same vessel at another site within the assigned cluster and conduct an interview, make sure you subtract one from the “missed eligible” tally at the fuel dock site.

Q. I see an eligible vessel temporarily docked at the fuel dock of the site I am currently interviewing at. However, the site manager does not allow interviews to be conducted at the fuel site. The vessel finishes fueling up and leaves the site. Do I count this vessel as a missed eligible?

A. No. This vessel should be counted as a refusal. This is different from a refusal by a captain or mate you are trying to interview. In the comments box on the SDF note the number of refusals that were due to the site manager not allowing interviewing at a particular location on site. Note: If you catch up with this same vessel at another site within the assigned cluster and conduct an interview, make sure you subtract one from the “refusal” tally at the fuel dock site.

Q. I arrive at my first site at 3:00 pm to begin the assignment. In the office the site manager informs me that the vessel “Tuna Time” returned from an overnight offshore tuna trip and got back to the dock at 1:00 pm. I walk the docks and find the “Tuna Time” in its slip but no one is around to interview. Do I tally this vessel as a “missed eligible”?

A. No. According to the definition only vessels that were missed while you were on site should be counted.

Q. I arrive at my first site at 3:00 pm to begin the assignment. In the office the site manager informs me that the charter vessel “Tuna Time” returned from an overnight offshore tuna trip and got back to the dock at 1:00 pm. I walk the docks and find the “Tuna Time” in its slip but no captain around. I ask a guy on the dock and he says the captain left but he fished on the boat as a paying passenger. Do I tally this vessel as a “missed eligible”?

A. No. According to the definition only vessels that were missed while you were on site should be counted. Since you were not at the site when

the captain was around this should be recorded as “not captain, owner or mate.”

Q. I arrive on site and notice the “Tuna Time” boat slip is empty. The manager confirms that the vessel went out tuna fishing earlier. I stay two hours on site but the Tuna Time still does not return. I leave the site and terminate the assignment. Should I count the Tuna Time as a missed eligible?

A. No, since the Tuna Time returned after you terminated the assignment it should be tallied under “Boats that have not returned.”

BOATS THAT HAVE NOT RETURNED:

When interviewers leave a site within the assigned cluster, and there are still boats that are expected back, they should record the number of vessels that have not yet returned. This tally should include all possible fishing vessels, not just LPS vessels.

Below are some Frequently Asked Questions (FAQs) that interviewers might have related to the definition of “boats that have not returned.”

“Boats that have not returned” FAQs

Q. Do I count jet-ski trailers or slips that I know are occupied by sailboats in the tally of “boats that have not returned?”

A. No. If you are almost certain that the vessel did not fish then do not include these.

Q. Do I count small fishing vessels that are not likely to be going off-shore for large pelagics?

A. Yes. If the vessel could be out saltwater fishing it should be counted as “boats that have not returned” regardless of the vessel size.

DID NOT TARGET LARGE PELAGIC SPECIES:

If an interviewer discovers during the screening process that they have intercepted someone that did not just complete an offshore oceanic fishing trip during which they targeted large pelagic fish, then they should tally the respondent in this box.

NOT CAPTAIN/OWNER OR MATE:

If an interviewer discovers during the screening process that they have intercepted someone who is not the captain, owner or designated proxy (Screener Item 1) then they should try to locate the eligible respondent, if all eligible respondents for the vessel have already left the site then tally as 'NOT CAPTAIN/OWNER OR MATE.'

The data fields above must be recorded for each site visited on a particular assignment whether or not any interviews were actually obtained.

RECORD DATA FOR EACH SITE WITHIN THE CLUSTER THAT YOU VISIT.

DO NOT LEAVE ANY TALLIES BLANK.

THIS INCLUDES SITE NAME, SITE CODE, COUNTY CODE, ESTIMATE # OF ELIGIBLE VESSELS PER DAY FOR CURRENT MONTH, (IF PRESENT, SITE REPRESENTATIVE, SITE REPRESENTATIVE TELEPHONE NUMBER), BEST TIME, COMPLETED INTERVIEWS BY BOAT TYPE, MID-INTERVIEW REFUSALS, INITIAL REFUSALS, LANGUAGE BARRIER, ESTIMATE OF MISSED ELIGIBLE BOATS, BOATS THAT HAVE NOT RETURNED, DID NOT TARGET OR CATCH LARGE PELAGIC SPECIES, and NOT CAPTAIN/OWNER OR MATE, FOR EACH SITE VISITED.

8.0 Assignment Summary Form (ASF)

The Assignment Summary Form (ASF) is used to summarize the results of the completed assignment, and to charge for work done on the assignment. Each assignment that you send in must include an Assignment Summary Form. An example of a blank Assignment Summary Form may be found in Appendix B.

INTERVIEWER NAME: The Interviewer should PRINT his or her name in BLOCK CAPITAL LETTERS.

INTERVIEWER CODE: Each Interviewer is given a unique four-digit identification number. This number, found on the back of the Agreement, should be used on all submitted forms.

INTERVIEW DATE: The Interviewer should record the Month/Day of the intercept. Two digits for both the month and the day should be used.

CONTROL NUMBER: Each assignment is given a four-digit identifying number. The first digit of the control number indicates if it is a weekend or weekday assignment. If the first digit is a 1, it is scheduled for a Saturday, Sunday, or holiday (e.g., July 4th, Independence Day). If the first digit is a 2, it is scheduled for Monday, Tuesday, Wednesday, Thursday or Friday. The second digit indicates the mode of the assignment. A 1 indicates an assignment during which private boat

intercepts are preferred, while a 2 indicates that charter boat intercepts are desired. NEVER LEAVE THE CONTROL NUMBER BLANK. BE SURE THAT YOU HAVE THE CORRECT CONTROL NUMBER GIVEN TO YOU BY YOUR FIELD SUPERVISOR.

STATE CODE: Enter the two-digit numeric code for the state of intercept. The state code list may be found in Appendix E.

CLUSTER. Enter the two digit number for the cluster of sites that you are assigned for that day. The cluster number should be listed in your assignment schedule. Possible values will range from 01, 02, 03...to 10.

BEGIN. Enter the time (military format) when you begin your assignment. That is, enter the time when you arrive on-site (at the first site in the cluster) to begin your assignment.

END. Enter the time (military format) when you finish your assignment. That is, enter the time when you leave the cluster and terminate the assignment.

Weather Favorable for Fishing Offshore?

Fill in the oval for “Yes” if the weather conditions are favorable for offshore fishing. If the offshore conditions are poor, fill in the oval for “No”. In general, strong winds (25-30 knots, especially from the Northeast) and high seas (especially greater than 8-10 feet) will cause many offshore fishermen to cancel their trips. Assignments that are conducted despite poor offshore conditions should be attempted only when fishing activity can be confirmed beforehand.

9.0 Administrative Issues

Data Delivery

Because of the rigid requirements for the LPIS, it is vital that QuanTech receive all completed Assignment Summary Forms, Site Description Forms, and Interview Questionnaires within 24 hours of assignment completion.

To accomplish this, we are distributing FAX machines **ON LOAN**. Interviewers are responsible for making arrangements to fax each day's work to QuanTech within 24 hours of assignment completion. Fax your forms **IN CHRONOLOGICAL ORDER** starting with the assignment summary form first and the site description form(s) second. If you forget to fax your forms in or there are any problems with the OCR data capture system reading your forms you may be asked to re-edit and re-fax your forms.

Only one fax TRANSMISSION per assignment. That is, if you are sending in forms from two assignments they must be sent separately!

QuanTech has provided a Toll Free FAX number for your convenience

Please fax all pages in order (assignment summary first, serving as the cover sheet) to **1-877-694-8808**.

If for any reason you are unable to fax completed forms within the time schedule, you must contact QuanTech and your Field Supervisor immediately so arrangements can be made to get your forms faxed in. We will not pay for any assignment that arrives at QuanTech too late for inclusion in each week's data delivery to NMFS.

ALL FAX MACHINES AND FIELD GUIDES PROVIDED TO YOU ON LOAN MUST BE RETURNED AT THE END OF THE INTERVIEWING SEASON BY NOVEMBER 21, 2012. IF YOU ARE FIRED, OR IF YOU QUIT, YOU MUST RETURN THEM IMMEDIATELY.

10.0 Field Supervisors

Each Interviewer has a Field Supervisor. This person is someone who is knowledgeable in the local fishing activity and fisheries in your area, and who is a veteran field Interviewer. This person will also be responsible for coordinating assignment scheduling, as well as conducting occasional quality control visits. You should contact your Field Supervisor whenever you:

- Need advice on fish identification;
- Have a question about the site register or a certain site; or
- Have a question about general interviewing procedures or coding.

Your primary contact while working on the LPIS will be your Field Supervisor.

You will contact your Field Supervisor for the following reasons:

- To schedule, “weather out” and reschedule or cancel an assignment;
- To see if there are any additional assignments available;

11.0 QuanTech Headquarters Staff

The headquarters office can be reached at 1-800-229-5220. If you need to contact the QuanTech headquarters office please contact any of the following staff members listed below.

Title	Name	Email Address	Phone Extension
Program Manager	Daemian Schreiber	dschreiber@quantech.com	7831
Data Manager	Robert O'Haver	rohaver@quantech.com	7822
Fishery Biologist	James Bethune	jbethune@quantech.com	7819

Please call or email QuanTech headquarters staff to confirm receipt of your faxed paperwork, discuss interviewing procedures or coding, etc. We will contact you frequently throughout the interviewing season to discuss the status of your assignments and to verify and/or obtain information, as required by our contract with NMFS. Please keep in mind that any critique of your work is meant to be constructive. We all have to work together to ensure that NMFS receives the best available data to make the best management decisions.

An example of an NMFS HMS permit. Note the location of the 8-digit permit number (XXXXXXXX) and the HMS Permit Category (Atlantic HMS Angling, in this case).

 1 Private Boat 8 Don't Know
 2 Charter Boat 9 Refused
 3 Party/Head Boat

10b. Was the trip today a charter trip or private trip?
 1 Charter 8 Don't Know
 2 Private 9 Refused

11a. Does the boat have a NMFS HMS permit, and if so, what category is it?
 1 General 4 No HMS Permit < GO TO Q.12
 2 Angling 8 Don't Know < GO TO Q.12
 3 Charter/Head Boat 9 Refused < GO TO Q.12

11b. What is your boat's NMFS HMS permit number?

12. Can you tell me/verify your boat's Coast Guard document number?

 2 Vessel has no Coast Guard Documentation number
 8 Don't Know
 9 Refused

13. Can you tell me/verify your boat's state registration number?

2 Vessel has no State Registration number
 8 Don't Know
 9 Refused

14. What State is the principal port of your vessel [on your HMS permit application]?
 < State Postal Code (Letters) < State FIPS Code (Numbers)

15. At about what time did your boat return to this site?
 (USE 24 HOUR CLOCK)

16. For what large pelagic species were you primarily fishing today? (Probe for at least one species. If Bluefin Tuna, probe for size category. Choose appropriate code from Coding List.)
 1st Target YFT
 2nd Target Delphin

17a. Were you participating in a tournament today?
 1 Yes 8 Don't Know < GO TO Q.18
 2 No < GO TO Q.18 9 Refused < GO TO Q.18

 < Tournament Code

18. What type of hooks were used? (READ LIST: FILL IN ALL THAT APPLY)
 1 Circle 3 Other (Specify Below)
 2 Non-Circle/J-Hook Other: _____

19. How many fishing lines were used?
 < Number of Lines

20. How many hours were spent fishing for large pelagic species? That is, how many hours were the lines in the water?
 < Number of Hours Spent Fishing

21. Which type of bait was used? (READ LIST: FILL IN ALL THAT APPLY)
 1 Live 1 Artificial
 1 Dead

22. Which method was used? (READ LIST: FILL IN ALL THAT APPLY)
 1 Trolling 1 Chumming
 1 Chunking 1 Other (SPECIFY BELOW)

23. How many people on the boat were actively fishing with rod and reel or handline for large pelagic species?
 < Number of People Fishing

24. Where were you fishing for large pelagic species?

< Lat. < Long.

25. How many miles were you offshore—that is, how many miles was it to the nearest land?
 < Number of Miles

26. How many feet deep was the water (depth to the bottom)?
 < Water Depth in Feet

27. What was the surface water temperature in degrees Fahrenheit?
 < Water Temperature

28. In the event that my supervisor wishes to verify that I have been conducting interviews here today, may I have your name and telephone number?
 RESPONDENT'S NAME AREA CODE AND TELEPHONE NUMBER

PROXY? < YES < NO < RESPONDENT WOULD NOT PROVIDE A NAME OR TELEPHONE NUMBER

29. Did you or anglers on your boat catch any fish today? Yes > GO TO Q.30 No > TERMINATE Refused > TERMINATE

2012 LPIS Screener and Introduction

Hello, my name is _____ and I represent the Fisheries Research Group of QuanTech, Inc. We are interviewing boat captains and owners for a study sponsored by the National Marine Fisheries Service of the U.S. Department of Commerce. I'd like to ask you a few questions about your fishing.

a. On this vessel, are you the captain, owner, or mate or passenger (proxy designated by the captain to participate in this survey)?

Yes *CONTINUE* No *TERMINATE AND TALLY*

b. Did your boat just return from an offshore rod and reel or handline fishing trip in which you targeted large fish such as tunas, billfish, sharks, swordfish, dolphinfish, wahoo, amberjack, or other large pelagic fish?

Yes *CONTINUE* No *TERMINATE AND TALLY*

PAPERWORK REDUCTION ACT AND PRIVACY ACT NOTICE:

Collection of information through the Large Pelagics Fishing Survey provides essential information for the conservation and management of Atlantic highly migratory species. Information on fish distribution and catch rates will be used for stock assessment and in developing management programs to enhance fishing opportunities. Public reporting burden for this collection of information is estimated to average 5 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: NMFS, Highly Migratory Species (F/SF1), 1315 East-West Highway, Silver Spring, MD 20910. Reporting of fishing effort and catch of highly migratory species is required under the authority of the Atlantic Tunas Convention Act. Consistent with the Privacy Act, it is NOAA policy to preserve the confidentiality of information submitted under this reporting requirement, except that NMFS may release such information in aggregate or summary form, such that individual identifiers are not disclosed (NOAA 216-100). Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

OMB Control # 0648-0380

Expires 11/30/2014

Appendix D: "To Whom" Letter from NMFS

UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
NATIONAL MARINE FISHERIES SERVICE
Silver Spring, MD 20910

MAY 10, 2012

TO WHOM IT MAY CONCERN:

The National Marine Fisheries Service (NMFS) is responsible for managing U.S. marine fish resources. Of particular interest are the Atlantic highly migratory species (tunas, billfish, swordfish, sharks) caught in offshore waters. NMFS closely monitors fishing effort and catch of these highly migratory species as these species support socially and economically important recreational and commercial fisheries. Information collected about the fisheries for these species is used to adjust management measures to sustain the fish stocks and the fisheries that depend on them.

Accurate information is vital to NMFS' efforts to manage highly migratory species. One of the methods NMFS uses to collect information on catch rates and fishing effort is the Large Pelagics Survey (LPS). LPS dockside interviewers collect catch information from boat captains upon their return from offshore fishing trips. Effort information (trips per week) is collected in a telephone survey of permit holders. In order to efficiently conduct the dockside survey, NMFS has contracted with QuanTech to conduct the interviews. Staff from QuanTech will interview boat captains or the captain's designee (i.e., mate) who have just returned from an offshore oceanic fishing trip which targeted large pelagic species such as tunas, billfish, sharks, and other similar species. The captains (or designees) will be asked a series of questions about their catch and by-catch for the trip just completed, and their catch will be counted. Some interviewers may measure fish lengths and weights.

The collection of catch information for Atlantic highly migratory species fulfills U.S. obligations to the International Commission for the Conservation of Atlantic Tunas and provides the basis for stock assessments and management of these valuable species in U.S. territorial waters and international waters. The authority for NMFS to collect information from recreational and commercial fishermen comes from the Atlantic Tunas Convention Act and the Magnuson-Stevens Fishery Conservation and Management Act. Under this authority, boat captains returning from offshore fishing trips and permitted vessel owners are required to provide catch and effort information to NMFS. Vessel owners issued an HMS permit are reminded that as a condition of accepting such permit, they are required to cooperate with any data collection survey if contacted. Responses to survey questions are classified as confidential and are maintained by NMFS consistent with the confidential fisheries statistics provisions of the Magnuson-Stevens Act and NOAA Administrative Order 216-100. Once collected, data may be released only in accordance with the Privacy Act.

For more information about the LPS and the activities of the QuanTech interviewers, please call or write:

Ronald Salz
National Marine Fisheries Service
1315 East West Hwy., Room 12359
Silver Spring, MD 20910

dschreiber@quantech.com

NMFS greatly appreciates the cooperation of offshore anglers in providing important management information by participating in the LPS dockside survey.

Sincerely,

Margo Schulze-Haugen, Chief
Highly Migratory Species Management Division

Local Names for Large Pelagic Species (sorted by local name)

<u>Local Name</u>	<u>Common Name</u>
Albacore	Little Tunny (commonly misidentified)
Albert	Little Tunny
Albie	Albacore
Allison Tuna	Yellowfin Tuna
Arctic Bonito	Skipjack Tuna
Bailers	Dolphinfish (small)
Blue Dog	Blue Shark
Bonito	Little Tunny (commonly misidentified)
Bonitocore	Little Tunny
Brown Shark	Used for Sandbar Shark or Dusky Shark
Bulls	Dolphinfish (Large males)
Canner	Albacore
Coldwater Mako	Porbeagle
Cows	Dolphinfish (Large females)
Dorado	Dolphinfish
Doggies	Blue Shark (could also be referring to dogfish shark)
False Albacore / Falsie	Little Tunny
Fat Albert	Bonito
Football	Used for Atlantic Bonito, Blackfin Tuna, Yellowfin Tuna, and Bluefin Tuna (school size)
Gaffers	Dolphinfish (large)
Giant	Bluefin Tuna (large medium and giant sizes)
Grasshoppers	Dolphinfish (Small)
Green Tuna / Green Bonito	Skipjack Tuna
Greenie	Skipjack Tuna
Lemon Shark	Tiger Shark (commonly misidentified)
Leopard Shark	Tiger Shark
Longfin	Albacore
Longtail Shark	Common Thresher Shark
Mahi Mahi	Dolphinfish
Oceanic Bonita	Skipjack Tuna
Peanuts	Dolphinfish (small)
Penguin	Albacore
Ragged Tooth	Sand Tiger Shark
Rum Jugs	Little Tunny
Sand Shark	Sand Tiger Shark
Skippy	Skipjack Tuna
Skinky	Little Tunny
Snaggle Tooth	Sand Tiger Shark
Spinner Shark	Blacktip Shark (commonly misidentified)
Striped Bonito	Skipjack Tuna (commonly misidentified)
Watermelon Tuna	Skipjack Tuna
Whiptail	Thresher Shark

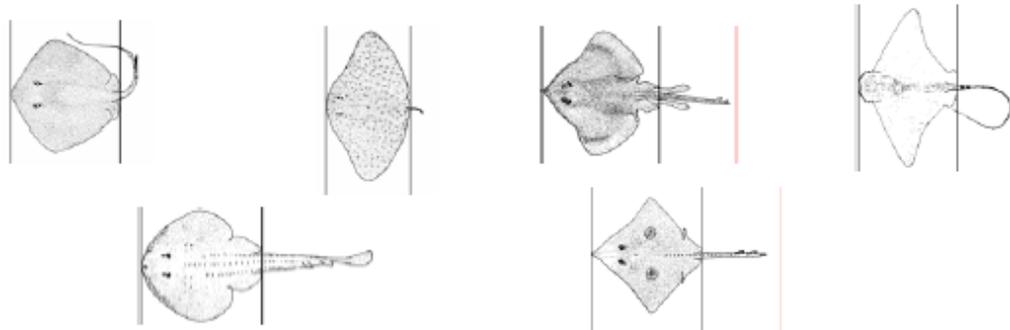

Appendix G: Measuring Fish

Correct procedures for measuring lengths of various types of fish are shown in the diagrams below.

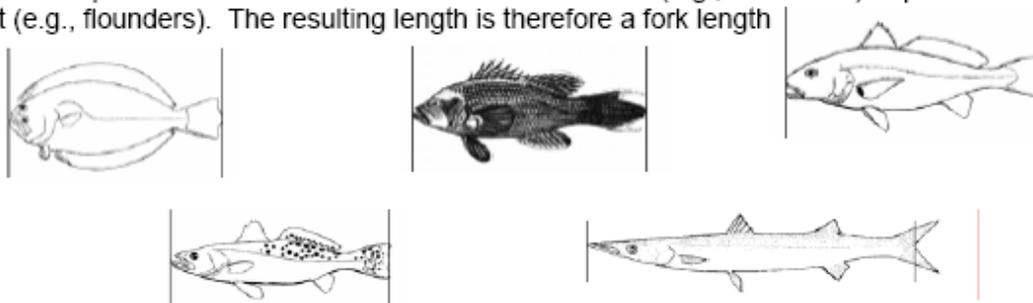

Sharks and sturgeons are measured from the tip of the snout to the center of the fork of the tail.

Skates and rays are measured from the tip of the snout to the distal end of the pelvic fins. Do not include the claspers.

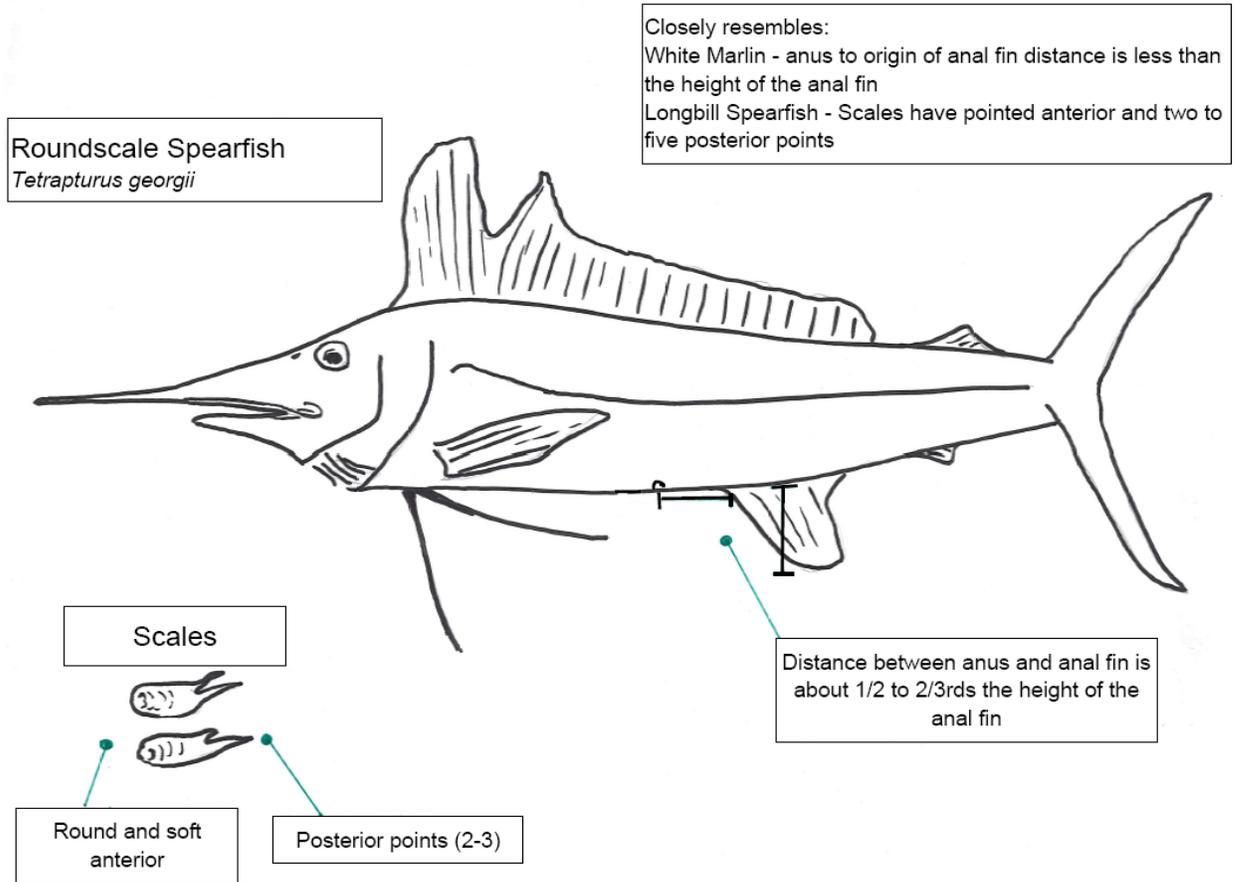

All other species are measured from the most anterior tip of the longest jaw (mouth closed) or end of snout, whichever is terminal, to the posterior tip of the tail at its center line. This procedure is the same whether the tail forks in (e.g., mackerels) or protrudes out (e.g., flounders). The resulting length is therefore a fork length

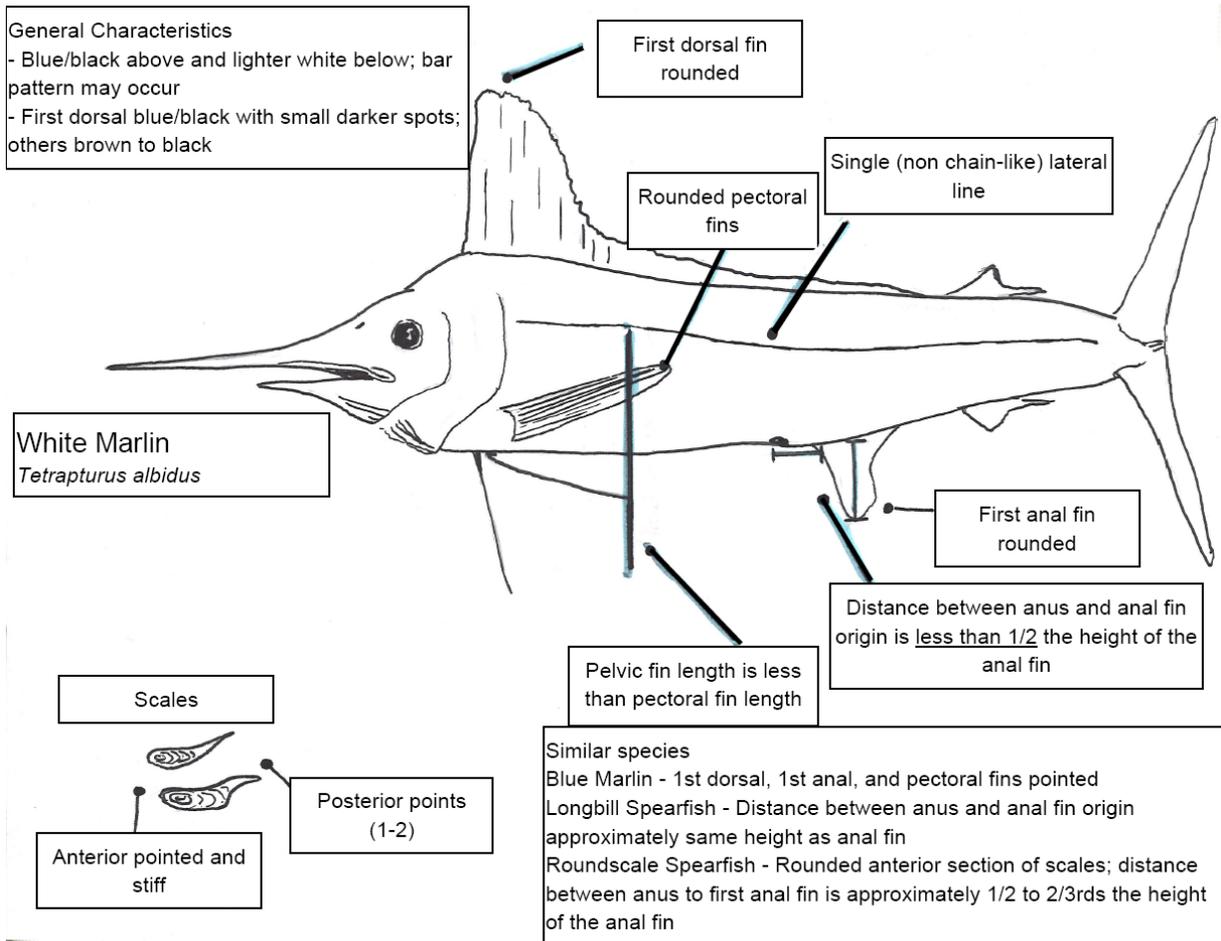

Measure the straight fork length of all fish in millimeters. For the following tuna species, curved fork lengths should also be recorded: bluefin, bigeye, albacore, yellowfin, and skipjack. Curved fork length must be taken in a line, tracing the contour of the body from the tip of the upper jaw to the fork of the tail, which abuts the dorsal insertion of the pectoral fin and the dorsal side of the caudal keel. The measuring tape must pass over (and touch) the pectoral fin and the caudal keel.

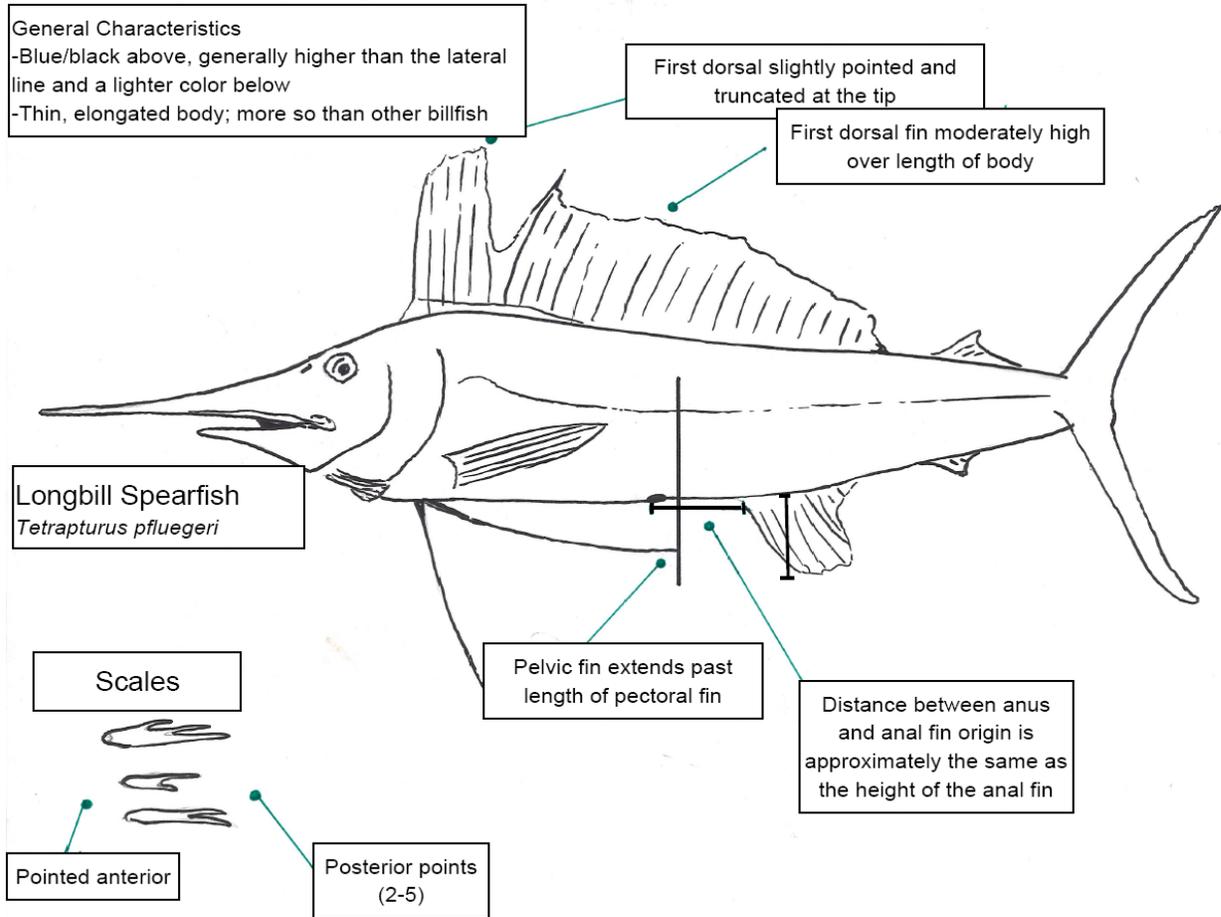

Appendix H: Identification of Roundscale Spearfish, White Marlin, and Longbill Spearfish

Roundscale Spearfish: Mid-body scales are noticeably round at the anterior end of the scale (facing in the direction of the head), as well as soft and flexible. The posterior end has two to three points present. The distance from the anus to the origin of the first anal fin is about 1/2 to 2/3rds the height of the anal fin.

White Marlin: Mid-body scales are not round, but pointed and stiff at the anterior end and have one to two points at the posterior end. As with the Roundscale spearfish, measure the distance between the anus and the origin of the first anal fin. This distance should be less than 1/2 the height of the anal fin.

Longbill Spearfish: Mid-Body scales are also not rounded, but pointed and stiff as in the White Marlin, but have two to five posterior points.

Appendix J: FAQs from HMSpermits.gov as of 5/16/2012

Q: What if my address has changed?

A: "It is important that you keep your permit information current. You may change your address when you renew your permit by speaking to a Customer Service representative at (888) 872-8862, or entering your new address as you renew via this website. If you move after you've renewed your permit, please call Customer Service and provide your new address. Your permit will be re-issued."

Q: Can I change my permit category?

A: Changes in the permit category must be made when you renew the permit for the upcoming season. However, permit applicants are allowed to make a permit category changes within 10-calendar days of the date of issuance of the permit to correct any potential errors. If you find an error within 10-calendar days of the date of issuance please contact Customer Service at 1-888-872-8862.

Q: Do I need a recreational permit to fish for or land tunas, sharks, swordfish, and/or bilfish?

A: Yes, vessel owners/operators who recreationally fish for or retain regulated Atlantic tunas (bluefin, yellowfin, bigeye, albacore, and skipjack), sharks, swordfish, and billfish in Atlantic Federal waters, including the Gulf of Mexico and the Caribbean Sea, must obtain an HMS Angling category permit or a HMS Charter/Headboat permit. However, General category vessels may fish recreationally for HMS so long as they are participating in a registered recreational HMS tournament and fishing under tournament rules. Vessels fishing exclusively in state waters are required to obtain the HMS Angling permit if they wish to keep their regulated tunas (bluefin, yellowfin, bigeye, skipjack, and albacore). Vessel owners/operators should check their state regulations regarding the retention of sharks, swordfish, and/or billfish in state waters.

Q: I currently possess a valid Atlantic tunas General category permit. Am I allowed to fish in recreationally tournaments for HMS with this permit?

A: General category vessels are allowed to participate in registered recreational HMS tournaments when fishing under tournament rules. When fishing for, retaining, possessing, or landing Atlantic tunas while participating in a tournament, General category vessels must comply with the Atlantic tunas General category regulations. When fishing for, retaining, or possessing sharks, swordfish, and/or billfish, General category vessels must comply with recreational regulations. It is incumbent upon the General category vessel owner/operator to verify that a tournament is registered with NOAA Fisheries.

Q: Is there a description of a General category permit ?

A: Yes, owners/operators of vessels fishing commercially for Atlantic bluefin, bigeye, yellowfin, albacore, or skipjack tunas using a combination of rod and reel, harpoon, and/or handlines must obtain a General category permit. This permit is required in the Atlantic, which includes the Gulf of Mexico and Caribbean Sea. This permit is required if fishing in Federal or State waters and because it is a commercial permit the U.S. Coast Guard Safety Gear Regulations will apply. Sale of tuna catch is permitted with this permit. Finally, if fishing is taking place in a registered

recreational HMS fishing tournament only, this permit will also allow a vessel to recreationally fish for sharks, swordfish, and/or billfish.

Q: Is there a description of an HMS Angling category permit?

A: Yes, owners/operators of vessels fishing recreationally, even catch and release, for Atlantic HMS (sharks, swordfish, billfish, and tunas) in the Atlantic, including the Gulf of Mexico and Caribbean Sea, must obtain an HMS Angling category permit. This permit is for recreational fishing only, no sale of catch is permitted. This permit allows a vessel to participate in registered recreational HMS fishing

Q: Is there a description of an HMS Charter/Headboat category permit?

A: Yes, owners/operators of charter/headboat vessels fishing for and/or retaining regulated Atlantic Highly Migratory Species (Atlantic tunas, sharks, swordfish and billfish) in the Atlantic Ocean, including the Gulf of Mexico and Caribbean Sea, must obtain an Atlantic Highly Migratory Species (HMS) permit. To be eligible for this permit category there MUST be a licensed Coast Guard Captain onboard the vessel during ALL HMS Fishing activities regardless if they are commercial, recreational, or fee based in nature. This permit allows a vessel to fish both commercially for tunas and recreationally for HMS, although not on the same day. Only the sale of tuna catch is permitted with this permit. This permit is required if fishing in Federal or State waters and because it is a commercial permit the U.S. Coast Guard Safety Gear Regulations may apply. This permit will also allow a vessel to fish in registered recreational HMS fishing tournaments.

Q: If I want to fish for Atlantic tunas, do I need a permit? Which species and what areas are covered?

A: Yes, owner/operators of state registered and Coast Guard Documented vessels fishing for Atlantic bluefin, bigeye, yellowfin, albacore, or skipjack tuna in the Atlantic, including the Gulf of Mexico and the Caribbean Sea, must obtain a permit. Only one category may be assigned to a vessel per year. The permit categories are as follows: General category (commercial tuna); Charter/Headboat (commercial tuna and recreational HMS); Angling category (recreational HMS); Harpoon category (commercial tuna); Trap category (commercial tuna); Purse Seine category (limited access); Longline (limited access).

Q: Does my permit need to be on board when I am fishing?

A: Yes, the owner or operator of a vessel of the United States must have the appropriate valid permit on board the vessel to fish for, take, retain, or possess Atlantic tunas, when engaged in commercial or recreational fishing. The vessel operator must make the permit available for inspection upon request by NMFS or a person authorized by NMFS.

Q: If a relative or friend is on my vessel and he/she has a permit, do I need a permit in this situation?

A: Yes, the Atlantic tunas permit is a vessel permit rather than an individual or "angler" permit. A permit is not transferable or assignable to another vessel or owner; it is valid only for the vessel to which it has been assigned.

Q: May I fish for Atlantic tunas without a vessel (e.g., from an oil rig or from shore)?

A: No, only permitted vessels may fish for Atlantic bluefin, bigeye, albacore, yellowfin, and skipjack tunas in the Atlantic, Gulf of Mexico, and the Caribbean. If one of these species is caught incidentally during fishing activities from shore or from an oil rig, it must be released immediately.

Q: What do I get when I pay for my permit?

A: Unlike many state permit programs, the permit fees go directly to the General Treasury and not to the managing agency (NMFS). The fee is set, in accordance with the procedures of the NOAA Finance Handbook, to recover the cost of administering the permit program, including maintenance of the public website and the toll-free phone system.

Q: If I witness a violation of NMFS regulations, how do I report it?

A: Please call the 24-hour NMFS Enforcement Hotline at (800) 853-1964. You may also call the U.S. Coast Guard Hotline at (800) SAVE-FISH. You do not need to give your name when you call.

Q: May I sell my tunas if I have an HMS Angling category permit?

A: No, if you have an HMS Angling category permit, you may not sell your catch. You must have a commercial fishing permit if you wish to sell your landings.

Q: Do I need any other permits in addition to a tuna permit?

A: If you use longline gear to fish for tunas, you must also have swordfish and shark limited access permits. If you are applying for a commercial permit, note that your state may require a permit for sale of fish. Contact your state fisheries agency for further information.
